These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be reported.

This book explains external cause coding in three parts: part 1 defines terms (such as controlled/noncontrolled fire, inanimate/animate mechanical forces, and heavy transport vehicle). Part 2 translates the confusing external cause guidelines into plain English and then formats the guidelines into charts so students or working coders can find the information easily. Finally, part 3 simplifies the external cause index to make finding the correct code easier and quicker. Guidelines for external cause codes effective October 1, 2016 through September 30, 2017.
