A Historical Perspective on Evidence-Based Immunology focuses on the results of hypothesis-driven, controlled scientific experiments that have led to the current understanding of immunological principles. The text helps beginning students in biomedical disciplines understand the basis of immunologic knowledge, while also helping more advanced students gain further insights. The book serves as a crucial reference for researchers studying the evolution of ideas and scientific methods, including fundamental insights on immunologic tolerance, interactions of lymphocytes with antigen TCR and BCR, the generation of diversity and mechanism of tolerance of T cells and B cells, the first cytokines, the concept of autoimmunity, the identification of NK cells as a unique cell type, the structure of antibody molecules and identification of Fab and Fc regions, and dendritic cells. Provides a complete review of the hypothesis-driven, controlled scientific experiments that have led to our current understanding of immunological principles Explains the types of experiments that were performed and how the interpretation of the experiments altered the understanding of immunology Presents concepts such as the division of lymphocytes into functionally different populations in their historical context Includes fundamental insights on immunologic tolerance, interactions of lymphocytes with antigen TCR and BCR, and the generation of diversity and mechanism of tolerance of T and B cells

Growing Up in America offers substantial and dramatic evidence that the history of childhood has come of age. Its authors demonstrate the breadth and depth of interest, as well as high quality of work, in a field that is finally attracting the attention it deserves. Strongly influenced by new social history and its concern for the powerless and inarticulate, Growing Up in America provides illuminating insights on children from infancy to adolescence and from the colonial period to present. "The very title of this fine and enormously instructive anthology of essays makes its quiet but important point—that children grow up in a particular nation, rather than in a family or home isolated from the influence of social, cultural, political, and historical forces. . . . An admirably diverse and instructive collection." -- Georgia Historical Quarterly

Poonam Bala tenaciously follows the developmental trajectory of medical pluralism in India with a keen eye to the dynamic social production of health and healing systems as social systems, practices, and technologies of power.

Japan has major problems to address, if it wishes to remain an economic superstar in the 21st century. Can Japan continue to grow as an economic superpower, now that it has caught up with the technological frontier by borrowing technology? Herbig explores the Japanese and American cultures, business practices, and government behavior, in order to determine an optimum combination. International managers and CEOs, business scholars and graduate students will find Herbig's insights into future scenarios for both Japan and America very valuable. After examining historical evidence of Japan's creativity, Herbig provides fresh insight into Japanese innovative strengths and weaknesses, and analyzes Japanese product development strategies and target costing. A comparison between U.S. and Japanese innovation processes shows how American thinking focuses excessively upon the earliest stages of the process. It also shows the advantages of imitation and application, as well as the risks involved in being a follower, even one as good as Japan.

The central role of the housing market in the recent recession raised a series of questions about similar episodes throughout economic history. Were the underlying causes of housing and mortgage crises the same in earlier episodes? Has the onset and spread of crises changed over time? How have previous policy interventions either damaged or improved long-run market performance and stability? This volume begins to answer these questions, providing a much-needed context for understanding recent events by examining how historical housing and mortgage markets worked—and how they sometimes failed. Renowned economic historians Eugene N. White, Kenneth Snowden, and Price Fishback survey the foundational research on housing crises, comparing that of the 1930s to that of the early 2000s in order to authoritatively identify what contributed to each crisis. Later chapters explore notable historical experiences with mortgage securitization and the role that federal policy played in the surge in home ownership between 1940 and 1960. By providing a broad historical overview of housing and mortgage markets, the volume offers valuable new insights to inform future policy debates.

Authors Peter Seixas and Tom Morton provide a guide to bring powerful understandings of these six historical thinking concepts into the classroom through teaching strategies and model activities. Table of Contents Historical Significance Evidence Continuity and Change Cause and Consequence Historical Perspectives The Ethical Dimension The accompanying DVD-ROM includes: Modifiable Blackline Masters All graphics, photographs, and illustrations from the text Additional teaching support Order Information: All International Based Customers (School, University and Consumer): All US based customers please contact nelson.orderdesk@nelson.com All International customers (exception US and Asia) please contact Nelson.international@nelson.com

This volume of interdisciplinary essays brings together leading academics from the disciplines of history, economic history, politics and sociology to review and take forward a series of debates on the role of culture in social explanation. The book will interest all those involved in cultural studies, but it is particularly concerned with the relationship between the economic and the cultural. The contributors suggest that the boundaries of production and consumption are themselves cultural constructs, formed by changing conceptions of economic and cultural explanation, but offer very different approaches to resolving the problems created by this. They agree only on the need for a self-critical exploration of the issues associated both with invoking culture as a factor in economic and social change and with seeking to correlate cultural trends -- whether in art or the history of ideas -- with social and economic developments. The case-studies are complemented by general essays, which show how both cultural studies and economic analysis can be enriched through an historical approach.

This book surveys the practice of horse racing from antiquity to the modern period, and in this way offers a selective global history. Unlike previous histories of horse racing, which generally make claims about the exclusiveness of modern sport and therefore diminish the importance of premodern physical contests, the contributors to this book approach racing as a deep history of diachronically comparable practices, discourses, and perceptions centered around the competitive staging of equine speed. In order to compare horse racing cultures from completely different epochs and regions, the authors respond to a series of core issues which serve as structural comparative parameters. These key issues include the spatial and architectural framework of races; their organization; victory prizes; symbolic representations of victories and victors; and the social range and identities of the participants. The evidence of these competitions is interpreted in its distinct historical contexts and with regard to specific cultural conditions that shaped the respective relationship between owners, riders, and horses on the global racetracks of pre-modernity and modernity. The chapters in this book were originally published as a special issue of The International Journal of the History of Sport.
