Continuing professional development (CPD) is essential for all health and social care professionals. It is also beneficial for organisations. Evidence shows that when there is significant investment in CPD, individuals feel valued and their practice improves. In order to maximise the potential of your CPD, this practical handbook guides you through the five TRAMm stages, which are depicted as stations: Tell (T), Record (R), Activity (A), Monitor (M) and measure (m). The tried-and-tested TRAMm model reflects the five standards for CPD laid down by the Health and Care Professions Council; and your own learning needs provide the main focus, enabling you to develop a full CPD portfolio as you progress. At the end of each chapter, there are opportunities to reflect on your learning – and apply theory to practice through a series of tasks. Designed for all levels (from health and social care students to experienced practitioners), this book may also be useful for associated support workers and other healthcare professionals, including doctors, pharmacists, optometrists, nurses and midwives. In addition, some aspects will be relevant for professionals outside healthcare, such as teachers, surveyors and engineers. Above all, this book demonstrates that CPD is closely linked to professional and personal success and well-being, and we should all see it as an essential part of our working lives. Contents include: • Preface • What is continuing professional development (CPD) and why do we do it? • Engaging in CPD and developing your learning style • Introduction to the TRAMm model • How do you plan and disseminate your CPD? TRAMm Station T: TELL • How do you record your CPD plans and activities? TRAMm Station R: RECORD • What counts as CPD? TRAMm Station A: ACTIVITY • How do you keep track of your CPD? Mapping Career Counseling Interventions provides an innovative insight into identifying and resolving problems within career management. In recent years, a myriad of counselling tools has been developed so that psychologists can offer the most appropriate support possible. To guide the selection of such tools, this book offers a map that introduces and links 63 frequent career management difficulties with more than 160 qualitative interventions and solutions. Through its highly organised layout and extensive detail, major career management difficulties--namely lack of motivation, indecisiveness, dysfunctional beliefs, lack of information, conflicts, and lack of employability--are scrutinized and divided into specific, more manageable sub-difficulties. Targeted interventions originating from vocational, motivational, and positive psychology are then suggested and described to address each of those difficulties. From these conclusions, the book delivers practical advice to help conduct these interventions in a sensitive and respectful manner. Overall, this book outlines the most effective ways to foster a good working alliance. One of the book's standout features is its inclusion of an inventory and card sort to facilitate the identification of obstacles to professional choice and career management. This book is a pivotal resource for the large and diverse community of career development practitioners, such as career counsellors, career advisors, employment counsellors or career coaches, regardless of their specific audience and work settings.

Contemporary public relations practice has developed over the last several decades from the weak third sister in marketing, advertising, and public relations mix to a full player. To help you keep up to speed with the exciting changes and developments of publications, this book has been updated to provide you with the necessary understanding of the problems and promises of public relations research, measurement, and evaluation. As a public relations professional, this book will guide you through the effective use of methods, measures, and evaluation in providing grounded evidence of the success (or failure) of public relations campaigns. This third edition takes a best practices approach-one that focuses on choosing the appropriate method and rigorously applying that method to collect the data that best answers the objectives of the research. It also presents an approach to public relations that emphasizes the profession's impact on the client's return on investment in the public relations function, the measurement of social media and the use of standardized measures.
