terrain lifter army

A thorough handbook covering the facts, history, and controversies surrounding our most controversial and misunderstood unconventional weapons. * Outstanding research aids include key Internet and published references and an index offering rapid access to entries on key figures, government agencies, and defensive equipment * A chronology of chemical-biological warfare incidents from the mid-20th century onward offers a thorough historical overview

The book is an authoritative history on the Army Air Defense Artillery Branch on Fort Bliss, Texas. Fort Bliss in 1940 was a cavalry post located on the Texas border. The post itself occupied the sixth location of what had been called Fort Bliss. In the summer of 1940 a number of Army National Guard antiaircraft regiments were called to active duty to spend one year protecting American cities and territories from air attack. In September the first antiaircraft regiment, the 202nd Coast Artillery (Antiaircraft) Regiment, arrived at Fort Bliss. Over the next four years the post became an antiaircraft training center and finally the Army antiaircraft

training center. After the war, Fort Bliss became the premier guided missile testing and training center for the Army. All of the Nike missile battalions deployed to protect American cities during the Cold War trained there. As time passed, Fort Bliss expanded to 1.1 million acres, one of the largest Army posts in the world. By 1946, the antiaircraft arm was the owner of Fort Bliss. By 1957, the post had become the Air Defense Center and School for the United States Army. This book is the story of that progression until the Base Realignment and Closure announcement in 2005. By 2011, the Air Defense Artillery Center and School will be located at Fort Sill, Oklahoma. This will end the era of Air Defense Artillery ownership of Fort Bliss, Texas

The United States government invests billions each year on equipping armed forces with the most advanced military equipment. The root of the American defense acquisition system is driven by a combination of national interests and domestic political requirements. While

fundamentally the defense acquisition system has produced results for the United States military, improvements are needed in order to continue to move forward in advancing military tactics and technology. Exploring both the systemic and political levels of the system, Sorenson argues that the United States will fall behind if the current defense acquisition system is not reformed. This book brings together elements of this complicated system, such as national security requirements, and the changes that are needed in both the structural and political pillars. A combination of political interests and the needs of the military, serviced by an ever-shrinking defense industry, make a genuine acquisition reform even more difficult, resulting in reform that is more symbolic than genuine.

Over 2,800 total pages ... INTRODUCTION Today's operational environment presents threats the Army has not faced in nearly 20 years. Against peer competitors, the joint force may face air parity or even localized enemy air overmatch, challenging the assumption of air superiority the joint force has held since the Korean War. This will make maneuver forces vulnerable to air attack by fixed- and rotary-wing aircraft, unmanned aircraft systems, and cruise missiles. Maneuver forces lack capacity and capability to address these threats and the Army requires a speedy response. Stinger missiles provide a key capability for maneuver forces to defend themselves from aerial observation and attack. However, without direct involvement from senior brigade combat team leaders and effective leader training, these missiles will become dead weight at best or a fratricide in waiting at worst. Units must plan effectively to utilize this capability and ensure it ties directly to their scheme of maneuver as opposed to simply task-organizing one Stinger team per company. Just a SAMPLE of the CONTENTS CALL
