On November 12, 2001, American Airlines flight 587, an Airbus A300-605R, took off from John F. Kennedy International Airport, New York. Flight 587 was a scheduled passenger flight to Santo Domingo, Dominican Republic, with a crew of 9 and 251 passengers aboard the airplane. Shortly after take-off the airplane lost its tail, the engines subsequently separated in flight and the airplane crashed into a residential area of Belle Harbor, New York. All 260 people aboard the airplane and 5 people on the ground were killed, and the airplane was destroyed by impact forces and a post crash fire.

consent . . . and help you one another in righteousness and piety. . . (Al-Hadid 4:29; Al-Ma'idah 5:2)

There cannot be any doubt that the current financial crisis, which began in the US, has gone global. This realization has fuelled the fire of debate over globalization. Today's globalization is no longer the globalization that Theodore Levitt, a former professor at the Harvard Business School, described in 1983 in his world famous article "The Globalization of Markets." Although, in old days, Levitt and his successors had not seen globalization as an utopian state free of problems, nowadays globalization has been reshaped completely. Therefore, in the perception of the editors it is justified to use the phrase "Globalisation 2.0" for the range of effects interpenetrating global economic arrangements. Globalisation 1.0 will never be restored again. Since the subprime crisis made its way to the global arena in the year 2008, companies and managers are confronted with the breathtaking speed of global, regional, and local changes. It is more than a provocation to divide developments into cause and effects. Forecasts in strategic management are no longer valid even for the moment they are published. Uncertainty occupies the driving seats in global, regional, and local oriented companies.

Maintainability is of crucial importance throughout industry and is established as one of the most important issues in the aerospace and defence arena. No new system can be introduced without full maintainability, analysis and demonstration; a type of analysis which reduces life cycle costs by decreasing operational and maintenance costs and increasing systems operational effectiveness, leading in turn to the creation of more competitive products. This book establishes the full methodology for maintainability mathematics and modelling, as well as the relationship between the maintainability and maintenance processes.

First Published in 2010. Routledge is an imprint of Taylor & Francis, an informa company.

Airworthiness: An Introduction to Aircraft Certification, Second Edition, offers a practical guide to the regulations of the International Civil Aviation Organization (ICAO), the U.S. Federal Aviation Administration (FAA), and the European Aviation Safety Agency (EASA). The discussions include the concepts of flight safety and airworthiness; the ICAO and civil aviation authorities; airworthiness requirements; type certifications and the type-certification process; production of products, parts, and appliances; certifications of airworthiness; and rules for spaceworthiness. The book will be a valuable resource for certification engineers engaged in professional training and practical work in regulatory agencies and aircraft engineering companies. The only airworthiness guide available—a unique single reference covering the requirements of the ICAO (International Civil Aviation Organisation), FAA (the US Federal Aviation Administration) and EASA (European Aviation Safety Agency) Demystifies the relevant European and US regulations and helps anyone involved in the manufacture, flying and maintenance of aircraft to understand this complex yet essential topic
