Each unique page spread provides an entire unit of understanding, breaking down complex concepts into easy-to-grasp sections for today's learner.

Excerpt from Veterinary State Board Questions and Answers This process depends upon electrolysis, that is, the decomposition of a chemical compound, the electrolyte, into its constituent parts, called ions, by an electric current. In a battery or in an electro lytic bath, the metallic, or electropositive ion is carried with the current through the electrolyte. Similarly, when a chemical salt is electrolysed, the metallic base is carried to the cathode (the negative pole of the battery). Therefore, by attaching the object to be plated at the cathode in a bath composed of a silver, gold or copper solution, it will become coated, or plated, with silver, gold or copper.
