What if there had been social media during the first mission to land a man on the Moon mission in 1969? If you were not fortunate enough to be able to witness the entire historic mission as it unfolded, this account will put you believably back inside those 8 dramatic and historic days. The unique social media format of the book allows us to experience all the drama and achievements as if we were following them live, and as if the participants were speaking to us directly in real time. The narrative is based on actual astronaut accounts, NASA transcripts of the fascinating continual communications with the astronauts, broadcasts of the all main TV networks covering the mission and the thoughts of many laypeople observers. The account also includes details that were not publicly available at the time, such as the secret speech to be delivered by President Nixon should the astronauts fail to return from the Moon. There is an extensive list of major sources at the end of the book. It is not a book, therefore, written in the usual book format. It is the story of man's first exploration of Earth's nearest neighbor, the Moon, told as if in real time in the form of imaginary social media posts by the main participants and observers. Although using the fictional (at the time) vehicle of social media, the book gives an accurate account of the historic mission, revealing what the people involved in, and those witnessing, the momentous events were thinking, doing and saying at each stage of the mission. The account covers the entire mission, from the tense build up and countdown to the launch to the heart-stopping descent to the lunar surface,

the first moonwalk, the experiments on the surface, the journey back to Earth, re-entry, recovery and the triumphal reception back in New York.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters. Contributing Authors David S. Bright, Wright State University Anastasia H. Cortes, Virginia Tech University Eva Hartmann, University of Richmond K. human spaceflight history describes for the first time how George E. Mueller, the system manager of the human spaceflight program of the 1960s, applied the SPO methodology and other special considerations such as "all-up" testing, resulting in the success of the Apollo Program. Wernher von Braun and others did not readily accept such testing or Mueller's approach to system management, but later acknowledged that without them NASA would not have landed astronauts on the Moon by 1969. While Apollo remained Mueller's priority, from his earliest days at the agency, he promoted a robust post-Apollo Program which resulted in Skylab, the Space Shuttle and the International Space Station. As a result of these efforts, Mueller earned the sobriquet: "the father of the space shuttle." Following his success at NASA, Mueller returned to industry. Although he did not play a leading role in human spaceflight again, in 2011 the National Air and Space Museum awarded him their lifetime achievement trophy for his contributions. Following the contributions of George E. Mueller, in this unique book Arthur L. Slotkin answers such questions as: exactly how did the methods developed for use in the Air Force ballistic missile programs get modified and used in the Apollo Program? How did George E. Mueller, with the help of others, manage the Apollo Program? How did NASA centers, coming from federal agencies with cultures of their own, adapt to the new structured approach imposed from Washington? George E. Mueller is the ideal central character for this book. He was instrumental in the creation of Apollo extension systems leading to Apollo, the Shuttle, and today's ISS and thus was a pivotal figure in early American human spaceflight history.

One day Sophie comes home from school to find two questions in her mail: "Who are you?" and "Where does the world come from?" Before she knows it she is enrolled in a correspondence course with a mysterious philosopher. Thus begins Jostein Gaarder's unique novel, which is not only a mystery, but

also a complete and entertaining history of philosophy.

The history-making astronaut, aerospace engineer and respected advocate for space colonization outlines a plan for taking humans to Mars within the next quarter century, posing business-specific arguments while outlining practical strategies for travel and planetary homesteading.

CD-ROM and Book. October 1968 and the US manned space program was about to be reborn. An entirely new space vehicle awaited its pilots at Pad 34. After 21 months the three-man Apollo space capsule had undergone a transformation. Over 1300 modifications had been made to the spacecraft following the tragic fire which had claimed the lives of the Apollo I crew. Now the three men who had been back-up crew for that ill-fated mission were faced with the task of flying an all-new space vehicle. It was to be the first manned flight of America's lunar spacecraft and it was to be the first manned launch of Wernher von Braun's giant Saturn IB rocket. The prestigious task of commanding the first Apollo mission was given to Captain Walter M Schirra, a veteran of America's Gemini and Mercury programs. Accompanying him were Command Module Pilot, Major Donn Eisele, and physicist-civilian, Walter Cunningham -- both were taking their first ride into space. Schirra, Eisele and Cunningham would be the first men to ride on a Saturn rocket and were then expected to fly the new spacecraft for the full length of a lunar mission. Every single onboard system would have to be tested and studied. Apollo 7 would be the longest first flight of any spacecraft or aircraft in the history of aviation. Incredibly, within nine months of this first manned Apollo mission, two Americans would fly the hardware to the Sea Of Tranquility.

Written by an L. A. County homicide detective and former atheist, *Cold-Case Christianity* examines the claims of the New Testament using the skills and strategies of a hard-to-convince criminal investigator. Christianity could be defined as a "cold case": it makes a claim about an event from the distant past for which there is little forensic evidence. In *Cold-Case Christianity*, J. Warner Wallace uses his nationally recognized skills as a homicide detective to look at the evidence and eyewitnesses behind Christian beliefs. Including gripping stories from his career and the visual techniques he developed in the courtroom, Wallace uses illustration to examine the powerful evidence that validates the claims of Christianity. A unique apologetic that speaks to readers' intense interest in detective stories, *Cold-Case Christianity* inspires readers to have confidence in Christ as it prepares them to articulate the case for Christianity.
