We disinfect our Aquaboss RO's weekly with 120 cc of Minncare, turn the RO off and allow the Minncare to dwell for 4 hours. The cultures come back OK, but we do see some endotoxin levels above the new action level of 0.125 EU/ml. Our membranes lasted about 1 1/2 years. I am not sure how much of a factor the frequent disinfection was in the membrane failure. I don't think you are doing anything ...

Acute organ damage and the ensuing multiple organ failure are the result of a pathophysiological process involving various cytokines. Once activated, these proteins cannot be eliminated even when the kidneys function at their maximum capacity. To counteract this mechanism, researchers in Japan have developed an innovative concept employing blood purification to remove the overwhelming cytokines. This book describes the use of hemodiafiltration to inhibit the cytokine storms which cause serious organ damage in patients with septic shock. Moreover, the technical construction of the blood purification system, which includes various machines, devices, membranes, fluids, etc., is explained in detail. Finally, leading experts discuss the concept of continuous renal replacement therapy as the standard care in critically ill patients with severe acute kidney injury. Describing the current state of acute blood purification, this publication provides new impulses and opens new avenues in the treatment of acute organ damage.

Long, long ago, when all the worlds were still one, there was a place called Daybreak Town. Here, under the leadership of the Foretellers, Keyblade wielders spent their days collecting light for their Unions- and you were no exception, fighting the darkness alongside your pal Chirithy (that's me!). But then, one day, you made an unusual new friend who warned you there was more to this world than met the eye. Meanwhile, conflict was building among the Foretellers and Unions, one that threatened everyone's future- including yours.
