This new manual takes a systemic approach with each chapter focusing on one body system. The order of chapters follows the traditional order found in anatomy or anatomy and physiology courses. The photos include skeletal images, photomicrographs of histology and cadaver dissections. This atlas includes full-color photographs of actual cadaver dissections instead of idealized illustrations, to accurately and realistically represent anatomical structures.

Santiago Ramon y Cajal's Textura del Sistema Nervioso del Hombre y de los Vertebrados, issued in Madrid from 1899 to 1904, was a comprehensive analysis of all parts of the nervous system in both man and animals, and the culmination of fifteen years of research. Cajal proved many of the connections between one section of the brain and another, and he illustrated these, as well as the many connections one cell makes with others. He described many nerve cells for the first time and also pointed out the plasticity of nerve cells in the brain, a discovery that has only recently come to be appreciated.

Designed to complement Robbins and Cotran Pathologic Basis of Disease, 9th Edition and Robbins Basic Pathology, 9th Edition, the full-color Robbins and Cotran Atlas of Pathology offers more than 1,500 outstanding illustrations that vividly depict the most common diseases covered in pathology courses and USMLE exams. It's a quick visual reference or review for students and professionals alike. Quickly compare gross, microscopic, and radiologic images with examples of normal organs and tissues. Review just the key information you need to know with help from extensive legends that provide convenient summarizations. Understand the correlation between pathology and clinical history, physical exam findings, and clinical laboratory tests. Access the fully searchable text online at Student Consult.

Nueva edición del atlas perteneciente a la familia "Robbins y Cotran": la más reputada internacionalmente en el ámbito de la anatomía patológica. En él se mantiene la organización de capítulos que se corresponden exactamente a los de la sección "Patología sistémica: enfermedades de los sistemas orgánicos" de la de la novena edición del Kumar, Robbins, patología estructural y funcional (Marzo 2015, adaptándose también perfectamente a la 9a ed de Kumar, Robbins Patología humana. Incluye más de 1.500 imágenes en color y blanco y negro microscópicas, macroscópicas y radiológicas. Cada una de ellas se complementa con una pequeña descripción que resume los puntos clave ilustrados en ella. En algunas ocasiones, en esa explicación se incluyen correlaciones con los datos de anamnesis, la exploración física y las pruebas analíticas. Cabe destacar que en cada uno de los capítulos del atlas se incluyen muchas más imágenes que en los correspondientes tratados de referencia, ya que además de las correspondientes a las patológicas, se incluyen también imágenes correspondientes a la normalidad e imágenes de anatomía de superficie. (Como ejemplo, en el capítulo "tracto digestivo" en el atlas se incluyen 142 imágenes, mientras que en el tratado sólo aparecen 54). La obra también ofrece contenido online en inglés a través de la plataforma StudentConsult.com, en el que se encuentran todas las imágenes del libro más 210 imágenes adicionales. En cada una de las imágenes puede aplicarse el efecto "zoom".
