Cost is considered a crucial factor in much decision-making in private and

Where To Download Atlas Copco Ga 11 Ff Manual

public organisations. Therefore, the ability to calculate total estimated costs for different alternatives is important. However, such total cost analysis is a challenging task.

Providing students with the knowledge and skills needed for total cost analysis is therefore relevant in

Several disciplines within higher education. Within logistics management, total cost analysis is for decades by several scholars regarded as a "cornerstone", a fundamental part of the discipline. However, except for describing the basic steps and presumptions, the literature does not

Hence, to address the lack of research, the purpose of this thesis was formulated as follows: To contribute to the understanding of conducting, learning, and teaching total cost analysis. Three research questions were shaped to address

each part of the purpose: conducting, learning and teaching. RQ1 What challenges are connected to the process of conducting total cost analysis? RQ2 What thresholds are there for learning how to conduct total cost analysis? RQ3 How can total cost learning be supported by suitable

Learning thresholds is needed to discuss suitable educational activities (RQ3). The research was conducted by a combination of literature reviews and multiple case studies at four Higher Education Institutions, where both teachers and students were approached. The findings for RQ1

were developed in an abductive procedure walking back and forth between literature and cases. A twelve-step process for total cost analysis was defined, and specific challenges associated for each of these steps. Regarding learning thresholds (RQ2), perceived difficulties with learning total

This resulted in the identification of four total cost learning thresholds. Literature on constructivist-based teaching was used to suggest teaching

These types of activities proved to match the ones most appreciated by teachers and students in the studied cases. The twelve-step process provides a more structured and holistic view of total cost analysis than previously available in the logistics
