The authors have examined carefully a number of Indian Universities and evolved a common minimum laboratory programme and the result is this compilation. The experiments chosen are the minimum required for undergraduate programmes. Some experiments have been purposely included so that they can be covered at demonstration level and can be given as exercises at the post graduate level. The authors have attempted to assemble the list of experiments from their experience and also have drawn upon the experience of the students who have undergone these laboratory courses and felt the inadequacy of the existing curriculum.

Primarily intended for the undergraduate students of science, the book deals with the practical aspects of organic chemistry and discusses how experiments should be done in the laboratory. The book introduces the various types of components used in laboratories and describes basic techniques used for purification. It elaborates different methods of identification of organic compounds, their preparation, and analysis. In addition, it emphasizes qualitative analysis of organic compounds. The book contains essential experiments done in an organic lab and also explains the theoretical background of reactions involved. This book is an attempt to provide students with the often used methods in an easy to understand manner, including explanations of theory, procedures and interpretations of results of the experiments. Besides undergraduate students of science, this book is also useful for the postgraduate students of chemistry.
KEY FEATURES : Includes reaction mechanism of each reaction
Describes in Appendices safety measures to be taken in laboratory and how to prepare chemical reagents
Contains self assessment questions at the end of each chapter.

In this book on quantitative analysis and reagent preparation, the authors adopt a novel approach-all the preparations have been given in the form of organic reactions in alphabetical order, with their respective reaction mechanisms. The procedures of some preparations are also discussed. Estimation of various compounds and functional groups is also included. A complete is devoted to chromatography, with exercises.
