The year 2007 marked the bicentenary of the Act abolishing British participation in the slave trade. Representing Enslavement and Abolition on Museums- which uniquely draws together contributions from academic commentators, museum professionals, community activists and artists who had an involvement with the bicentenary - reflects on the complexity and difficulty of museums’ experiences in presenting and interpreting the histories of slavery and abolition, and places these experiences in the broader context of debates over the bicentenary’s significance and the lessons to be learnt from it. The history of Britain ’ s role in transatlantic slavery officially become part of the National Curriculum in the UK in 2009; with the bicentenary of 2007, this marks the start of increasing public engagement with what has largely been a ‘ hidden ’ history. The book aims to not only critically review and assess the impact of the bicentenary, but also to identify practical issues that public historians, consultants, museum practitioners, heritage professionals and policy makers can draw upon in developing responses, both to the increasing recognition of Britain ’ s history of African enslavement and controversial and traumatic histories more generally.

H.R. 1612, Public Lands Service Corps Act of 2009: legislative hearing before the Subcommittee on National Parks, Forests, and Public Lands of the Committee on Natural Resources, U.S. House of Representatives, One Hundred Eleventh Congress, first session, Thursday, April 2, 2009.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines ’ applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets
