Essential Cell Biology provides a readily accessible introduction to the central concepts of cell biology, and its lively, clear writing and exceptional illustrations make it the ideal textbook for a first course in both cell and molecular biology. The text and figures are easy-to-follow, accurate, clear, and engaging for the introductory student. Molecular detail has been kept to a minimum in order to provide the reader with a cohesive conceptual framework for the basic science that underlies our current understanding of

all of biology, including the biomedical sciences. The Fourth Edition has been thoroughly revised, and covers the latest developments in this fast-moving field, yet retains the academic level and length of the previous edition. The book is accompanied by a rich package of online student and instructor resources, including over 130 narrated movies, an expanded and updated Question Bank. Essential Cell Biology, Fourth Edition is additionally supported by the Garland Science Learning System. This homework platform is designed to evaluate and improve student performance and allows instructors to select assignments on specific topics and review the performance of the entire class, as well as individual students, via the instructor dashboard. Students receive immediate feedback on their mastery of the topics, and will be better prepared for lectures and classroom discussions. The user-friendly system provides a convenient way to engage students while assessing progress. Performance data can be used to tailor classroom discussion, activities, and lectures to address students' needs precisely and efficiently. Visualizing Human Biology is a visual exploration of the major concepts of biology using the human body as the context. Students are engaged in scientific exploration and critical thinking in this product specially designed for non-science majors. Topics covered include an overview of human anatomy and physiology, nutrition, immunity and disease, cancer biology, and genetics. The aim of Visualizing Human Biology is a greater understanding, appreciation and working knowledge of biology as well as an enhanced ability to make healthy choices and informed healthcare decisions.

For non-majors/mixed biology courses. Build a flexible non-majors biology course with science literacy at its core. Eric Simon's Biology: The Core combines a succinct, beautifully illustrated 12-chapter

textbook with engaging MasteringBiology assignment options and extensive instructor support materials. The Core delivers a uniquely flexible teaching and learning package that supports Active Learning or "Flipped Classroom" teaching techniques, and an emphasis on current issues that relate to basic biological concepts. The modular organization of the text makes it easy for instructors to teach concepts in their preferred order, and powerful online assignment options reinforce those concepts by clarifying the "big picture" and preparing your students with the biological literacy skills required to make informed decisions outside the classroom. The Second Edition text and MasteringBiology assignment options further revolutionize teaching in and out of the classroom with a greater emphasis on the nature of science and dozens of new opportunities for students to practice basic science literacy skills. The Core's concise modules continue to focus students' attention on the most important concepts, combining dynamic figures and illustrations with supporting narrative as the primary source of instruction to create a more engaging and accessible learning experience for students. The new edition has been revised to strengthen the ways the text, MasteringBiology, and the instructor support materials work together in meeting the needs of both instructors and students-before, during, and after class. Also available with MasteringBiology (tm) MasteringBiology is an online homework, tutorial, and assessment product proven to improve results by helping students quickly master concepts. Students benefit from opportunities to practice basic science literacy skills, using interactive resources that create engaging learning experiences. Effective activities in MasteringBiology help students further visualize and understand complex biological processes. Comprehensive instructor tools include MasteringBiology assignment options. Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
