Filling a gap in the present inventory of Plastic Surgery Textbooks, this compact, practice-oriented study guide delivers comprehensive, clear and up-to-date information on all the basics of plastic surgery in clinical practice. Methodological rigor, together with a lean style and layout were chosen; boxes and teaching objectives are included to help memorize fundamentals. Starting from basics such as the physiology and pathology of skin and wound healing, suture techniques, dressings and dermal substitutes, grafts, flaps and microsurgical techniques, the textbook then tackles topics including malformations, skin cancer, and traumas like burns and wounds. The respective contributions were written by American, British, Italian, German, Korean and Taiwanese teaching experts in the field. Over 250 full color illustrations, line drawings, and videos support the main text: accordingly, this textbook will appeal to advanced, upper-undergraduate students and residents preparing for plastic and reconstructive surgery in-training.

Total Burn Care guides you in providing optimal burn care and maximizing recovery, from resuscitation through reconstruction to rehabilitation! Using an integrated, "team" approach, leading authority David N. Herndon, MD, FACS helps you meet the clinical, physical, psychological, and social needs of every patient. With Total Burn Care, you'll offer effective burn management every step of the way! Effectively manage burn patients from their initial presentation through long-term rehabilitation. Devise successful integrated treatment programs for different groups of patients, such as elderly and pediatric patients. Browse the complete contents of Total Burn Care online and download images, tables, figures, PowerPoint presentations, procedural videos, and more at www.expertconsult.com! Decrease mortality from massive burns by applying the latest advances in resuscitation, infection control, early coverage of the burn, and management of smoke inhalation and injury. Enhance burn patients' reintegration into society through expanded sections on reconstructive surgery (with an emphasis on early reconstruction), rehabilitation, occupational and physical therapy, respiratory therapy, and ventilator management.

Burns are one of the most devastating conditions encountered in medicine. The injuries affect people of all ages, both physically and psychologically, in the developed and the developing world. The correct management of burns needs a skilled multidisciplinary approach and this ABC provides an overview of the most important aspects of burn injuries for healthcare professionals. This ABC book offers a comprehensive yet accessible review of burn management. It introduces the range of burns that a GP may become involved in treating or having treated at hospital. From explanations of how burns happen, through to first aid applications, pre-hospital treatment, dressings, resuscitation and the management of deep dermal burns. It also looks at the subsequent management of burns through hyperalmentation and microbiological management, reconstruction and rehabilitation. A significant contribution to an important area of care: burns are the second most common cause of accidental death in children in the UK. Early treatment of burns is essential to avoid disablement: impact on lungs, infection and later need for plastic surgery can all be reduced by appropriate assessment and prompt treatment. Includes contributions from the UK, USA and Australia, and has a chaper on international disasters. Presented in a clear and concise manner with many illustrations, this book will appeal to a wide readership including medical students, nurses, hospital doctors, and general practitioners.

The diagnosis, prognosis and choice of various types of treatment of burn wounds depends largely on the physical appearance of the wound itself and of the surrounding tissue. This atlas offers a selection of illustrations of common and unusual burns, caused by a variety of agents. The accompanying captions provide an introduction to the identification and classification of burns. Outlines of the appropriate management are offered for each type of injury, with before, during and after treatment sequences where necessary.

The aim of this book is to give readers a broad review of burn injuries, which may affect people from birth to death and can lead to high morbidity and mortality. The book consists of four sections and seven chapters. The first section consists of the introductory review chapter, which overviews the burn injuries. The second section includes chapter "Burn Etiology and Pathogenesis," which focuses on burn injuries and clinical findings. The third section consists of chapter "Controlling Inflammation in Burn Injury" and is devoted to the role of inflammatory response, which is fundamental to the healing process, while a prolonged inflammation may lead to scarring and fibrosis. The fourth section consists of four chapters as follows: "Therapeutic Effects of Conservative Treatments on Burn Scars," "Herbal Therapy for Burns and Burn Scars," "Platelet-Rich Plasma in Burn Treatment," and "Surgical Treatment of Burn Scars." The book is easy to read and includes hot topics on burn injury to enhance the reader's understanding and knowledge.

Child injuries are largely absent from child survival initiatives presently on the global agenda. Through this report, the World Health Organization, the United Nations Children's Fund and many partners have set out to elevate child injury to a priority for the global public health and development communities. It should be seen as a complement to the UN Secretary-General's study on violence against children released in late 2006 (that report addressed violence-related or intentional injuries). Both reports suggest that child injury and violence prevention programs need to be integrated into child survival and other broad strategies focused on improving the lives of children. Evidence demonstrates the dramatic successes in child injury prevention in countries which have made a concerted effort. These results make a case for increasing investments in human resources and institutional capacities. Implementing proven interventions could save more than a thousand children's lives a day.--p. vii.

This text book is open access under a CC BY 4.0 license. Written by a group of international experts in the field and the result of over ten years of collaboration, it allows students and readers to gain to gain a detailed understanding of scar and wound treatment – a topic still dispersed among various disciplines. The content is divided into three parts for easy reference. The first part focuses on the fundamentals of scar management, including assessment and evaluation procedures, classification, tools for accurate measurement of all scar-related elements (volume density, color, vascularization), descriptions of the different evaluation scales. It also features chapters on the best practices in electronic-file storage for clinical reevaluation and telemedicine procedures for safe remote evaluation. The second section offers a comprehensive review of treatment and evidence-based technologies, presenting a consensus of the various available guidelines (silicone, surgery, chemical injections, mechanical tools for scar stabilization, lasers). The third part evaluates the full range of emerging technologies offered to physicians as alternative or complementary solutions for wound healing (mechanical, chemical, anti-proliferation). Textbook on Scar Management will appeal to trainees, fellows, residents and physicians dealing with scar management in plastic surgery, dermatology, surgery and oncology, as well as to nurses and general practitioners

ABC of Wound Healing ABC of Wound Healing, Second Edition ABC of Wound Healing is a practical, highly illustrated guide to assessment, diagnosis and management of all common types of acute and chronic wounds. This concise yet comprehensive reference covers all essential aspects of wound healing care, including epidemiology, pathophysiology, assessment, treatment, long-term management, and prevention This revised second edition contains several new chapters on lymphoedema, nutrition, skin care, continence, and scarring. Updated and expanded chapters cover a wider range of devices and therapies, and discuss additional factors that impact wound healing processes, offering new clinical photographs as a visual guide. Applying a multidisciplinary approach to the provision of wound care, ABC of Wound Healing: Covers common wounds including traumatic wounds, surgical wounds, diabetic foot ulcers, pressure injuries, and venous and arterial leg ulcers Emphasises the importance of reaching a diagnosis, the fundamental step in managing any wound Provides up-to-date information on physical, chemical, biological and emerging therapies for patients with various types of wounds Contains hundreds of full-colour illustrations and clinical photographs of wounds and treatments ABC of Wound Healing, Second Edition, remains a must-have guide for junior doctors, specialist registrars in medicine and surgery, specialist nurses, general practitioners and medical students.

Post-burn scar contractures are a commonly encountered problem in the field of plastic and reconstructive surgery. Nevertheless, many physicians still lack adequate knowledge on beneficial treatments. In this up-to-date atlas, leading specialists in post-burn treatment and the reconstruction of post-burn scar contractures depict in detail not only surgical techniques but also a variety of advantageous wound treatments. Many new methods invented by the authors are presented. Operative techniques are depicted in detail, and clear guidance is provided on selection of the most appropriate flap surgery. Advice is also given on how to prevent permanently disabling restriction of joint movement as a result of contractures and how to achieve good aesthetic reconstruction. This atlas is designed to appeal to a wide audience, from beginners to specialists. It will prove invaluable for doctors of every kind who deal with wound management.
