Documents the full range of normal cytologic findings encountered in all body areas. Designed to help readers identify normal specimens from any organ system, as well as from neighbouring structures that may have been sampled accidentally. Covers both exfoliative and fine needle aspiration cytology with an emphasis on standard (Papanicolaou and Diff-Quik) stains. Examines a single organ in each chapter, beginning with a brief overview of that organs anatomy and its relationship to nearby body systems.

Master the art and science of specimen collection, preparation, and evaluation with *Canine & Feline Cytology: A Color Atlas and Interpretation Guide, Second Edition*. This easy-to-use guide covers all body systems and fluids including a special chapter on acquisition and management of cytology specimens. Hundreds of vivid color images of normal tissue alongside abnormal tissue images – plus concise summaries of individual lesions and guidelines for interpretation - will enhance your ability to confidently face any diagnostic challenge. A greatly expanded image collection, with more than 1,200 vivid, full-color photomicrographic illustrations depicting multiple variations of normal and abnormal tissue for fast and accurate

diagnosis Clear, concise descriptions of tissue sampling techniques, slide preparation and examination guidelines Helpful hints for avoiding technical pitfalls and improving diagnostic quality of specimens Includes all body systems and fluids as well as pathological changes associated with infectious agents Histologic and histopathologic correlates provided in all organ system chapters. User-friendly format and logical organization facilitates readability and learning. Expert contributors represent the most respected leaders in the field. NEW! Chapter on Fecal Cytology Highlighted boxes featuring Key Points provide helpful tips for best conceptual understanding and diagnostic effectiveness Photomicrographs now include more comparative histology Discussions of broader uses of stains and immunocytochemistry for differential cytologic characterization Expanded chapter on Advanced Diagnostic Techniques includes more methodology and application of current tools, representing advances in both aspiration and exfoliative cytology.

Make accurate diagnoses by mastering techniques for specimen collection, preparation, and evaluation! Help students face diagnostic challenges with this guide to specimen collection and evaluation! Canine and Feline Cytology: A Color Atlas and Interpretation Guide, 3rd Edition provides a comprehensive overview of diagnostic cytology for companion animals, covering all body systems. Hundreds of photomicrographs show cytology of normal structures to contrast and support identification of cytology of inflammatory, hyperplastic, and neoplastic lesions. Enhancements to this new edition include more histopathologic correlates, expanded immunochemical stains and molecular-based testing to further define the neoplastic cell type, and descriptive schematics that illustrate pathophysiologic concepts.

Written by seasoned veterinary cytologists Rose Raskin and Denny Meyer - with over 80 years of combined microscopic experiences - along with 20 expert contributors, this reference offers clear, practical guidelines to sampling procedures, slide preparation, and interpretation leading to diagnoses and/or classification of the cytologic findings. Comprehensive coverage of all body systems and body fluids - and the pathological changes associated with various infectious agents - emphasizes areas in which the application of cytology has the greatest diagnostic value. Exceptional-quality, full-color photomicrographs show both normal and abnormal tissue and also include detailed legends. Discussions of clinical, differential, and cytological diagnosis accompany the illustrations of lesions and conditions in each chapter. Helpful hints for improving specimen quality are provided in discussions of common errors and problems encountered in the preparation of cytological specimens. Coverage of histology in organ system chapters demonstrates the histological or histopathologic corollary of cytologic findings. Clear, concise descriptions include sampling techniques, slide preparation and examination, and guidelines for interpretation, leading to accurate in-house and commercial laboratory diagnosis. Easy-to-use, well-organized format includes many tables, algorithms, boxes, and Key Point callouts for at-a-glance reference. NEW examples and identifiers and a new discussion on artifacts address the latest developments in canine and feline cytology. NEW! Dozens of new images include photomicrographs of blood and bone marrow cytology. NEW! All-new appendix summarizes clinically relevant information on artifacts, special tests, specific characteristics, and much more. UPDATED sampling techniques and examination guidelines include information on how and where to test for specific conditions.

diagnostic cytologic techniques for companion animals. It includes a comprehensive range of normal tissue preparations as well as the most common inflammatory, hyperplastic, and neoplastic samples. It stands apart from other books on the market because of its comprehensive coverage of normal samples.

This atlas examines the benefits and limitations of immunocytochemistry (ICC) in contemporary cytology. The text addresses offers practical advice on choice of markers, and illustrates the use of ICC in fine needle aspiration and body cavity fluid cytology. This practical handbook will allow for quick reference in the selection and interpretation of markers in specific differential diagnostic in the daily practice of diagnostic cytology. Includes 299 color illustrations.

This color atlas covers etiology, incidence, clinical features, diagnostic features, immunochemistry, molecular biology and important differential diagnosis of various lesions of the body. It includes large number of microphotographs, around 1500 of all the common and uncommon lesions of the body that can be diagnosed by aspiration cytology. It also includes images of immunocytochemistry and other important ancillary tests of the lesions. Additionally, it includes a review chapter on interesting cases of fine needle aspiration cytology (FNAC) along with multiple choice questions. This book provides necessary information to the readers for the diagnosis and differential diagnosis of the body lesions with

This book presents colored gross and microphotographs of histopathology sections of both common and uncommon tumors of the female genital tract, and also includes the immunohistochemistry of the important lesions. Further, it explains the salient diagnostic features and the immunocytochemistry, molecular pathology and differential diagnosis of each lesion with brief references and discusses recent advances in the diagnosis of these tumors. With numerous images offering guidance on diagnosing different lesions of the female genital tract, the book is intended for practicing pathologists and post-graduate students as well as for gynecology practitioners and post-graduate students.

Thoroughly updated for its Second Edition, this comprehensive, profusely illustrated text/atlas covers the full range of pulmonary pathology, including common, rare and newly described diseases, both neoplastic and non-neoplastic. The book presents a multimodality approach to diagnosis, integrating cytologic, radiologic, surgical, and clinical pathologic features of each disease. By combining carefully chosen color illustrations with lists of distinguishing features of each entity, this text/atlas provides a quick path to accurate diagnosis. This edition features updated sections on pulmonary hypertension, pulmonary hemorrhage, lung transplantation, and pediatric pulmonary pathology, including new classification and grading systems. Throughout the book, new entities and new images have been added. An online image bank provides instant access to all the book's illustrations.
