provide maximal support to abstract-users, and (2) develop these guidelines so that they result in reliable, i.e., consistent, abstracts of scientific/technical material. The abstracting procedure, and Abstracting Form and associated instructions, produces reasonably consistent abstracts. An expert judge rated 13 subsections of six technical papers prepared by three different abstracters as 88% consistent, i.e., contained identical information. The abstracts prepared were a substantial reduction of the original text. Considering the six abstracts used in a performance test (judged as containing the most information, but not necessarily the longest) mean percentage reductions obtained were: 47% reduction of words, 28% reduction of figures, and 27% reduction of equations. Level of performance, as measured by accuracy on use-tests, supported by abstracts was equivalent to that supported by original text, regardless of test time restriction. However, total test time required was less using abstracts than with full text. (Author).

This book is more or less a companion volume of the author's book Introduction to Social Systems Engineering published by Springer in March, 2018. Since social systems engineering is a complex emerging discipline, this book will focus more on the evolution of the concept and the formation process. This is related to the book Introduction to Social Systems Engineering within the context of the author's working and study experience of around 33 years in engineering and 36 years in policy research and planning at national and regional level.
