This IBM Redbooks publication reviews the overall Tivoli Enterprise Security Architecture. It focuses on the integration of audit and compliance, access control, identity management, and federation throughout extensive e-business enterprise implementations. The available security product diversity in the marketplace challenges everyone in charge of designing single secure solutions or an overall enterprise security architecture. With Access Manager, Identity Manager, Federated Identity Manager, Security Compliance Manager, Security Operations Manager, Directory Server, and Directory Integrator, Tivoli offers

a complete set of products designed to address these challenges. This book describes the major logical and physical components of each of the Tivoli products. It also depicts several e-business scenarios with different security challenges and requirements. By matching the desired Tivoli security product criteria, this publication describes the appropriate security implementations that meet the targeted requirements. This book is a valuable resource for security officers, administrators, and architects who want to understand and implement enterprise security following architectural guidelines.

According to a recent iPass report, 73% of enterprises allow non-IT managed devices to access corporate resources. 65% of companies surveyed reported security issues. This ebook looks at the security risks of an increasingly mobile workforce and proposes a range of possible solutions. Written by security experts, topics covered include: using personal mobile devices at work (BYOD); password security; data encryption; raising user awareness and the importance of appropriate security policies; securing networks; legal aspects of data security; and the danger of risk trade-offs.

Empathy, diversity, inclusion, and soft skills are key building blocks of an innovative workforce challenged to respond to the ever-growing needs of the COVID-19 era. Organizations that value diversity and inclusion are looking for ways to manage the shift of workers and skills from traditional manufacturing to the 21st-century vision by incorporating new technology and tools. In this new model, a diverse workforce is necessary, as creativity and innovation grow from the skills that differentiate humans. Further research into the next steps for using diversity and inclusion in an efficient manner, discovering and training new skill sets, and building sustainability into the creative process is needed to fully embrace this new era of inclusion. Multidisciplinary Approach to Diversity and Inclusion in the COVID-19-Era Workplace highlights best practices of successful companies in the “new normal” conditions caused by the pandemic and provides innovative research on diversity and inclusion to help organizations navigate the changing competitive global environment. Covering a range of topics such as remote work, unconscious bias, and information literacy, it is ideal for professors, researchers, academicians, practitioners, human resource professionals, industry professionals, and students.

UMTS is not about Technology, it is about Services... The UMTS or 3G environment is the ultimate convergence of fixed and mobile, voice and data, content and delivery. The result will be the largest and most complex communications system that man has designed. If you want a challenge then this is the industry to be in. Services for UMTS (Universal Mobile Telecommunication System) or 3G (3rd Generation mobile networks) is a book about the near future, where UMTS allows mobile phones and other devices for communication, entertainment, personalised services, utility and fun to be used in new ways. While it is difficult to predict the potential of UMTS in the future in a precise way, broad categories and general service ideas are emerging. This book looks at over 200 of these possible applications and provides more detailed scenarios for over 100 of them. It explores these ideas in depth, with suggestions on how to create exciting and viable services for a new world. This book intends to answer many of the current UMTS service questions as well as introduce new ideas and concepts to enable operators to create a winning UMTS services strategy. \* What should the focus of service creation be to ensure early time to profit in UMTS? \* What are the key market segments that should be addressed with UMTS services? \* Is there a killer application or applications that will revolutionise the industry? \* What are the differentiating factors that will separate the leaders from the UMTS pack? \* 15 aspects of the business analyzed by value chains and business models \* The 5 M's of successful UMTS Service Definition Written for the non-technical reader and with a strong business focus, Services for UMTS
