This book disseminates original research on learning in and from practice in pre-service teacher education. Authors such as Lederman and Lederman describe the student teaching practicum (or work-integrated learning [WIL]), which is an essential component of pre-service teacher education, as the 'elephant in the room'. These authors note that 'the capstone experience in any teacher education programme is the student teaching

practicum... [a]fter all, this is where the rubber hits the road'. However, many teacher educators will agree that this WIL component is sometimes very insufficient in assisting the student teacher to develop their own footing and voice as a teacher. This is the 'gap' that this research book addresses. Most of the chapters in the book report empirical data, with the exception of two chapters that can be categorized as systematic reviews. WIL is addressed from various angles in the chapters. Chapter 6 focuses on research related to what makes Finnish teacher education so effective, and in Chapter 4

researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open-and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where “safe spaces” or laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the

findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in the field of pre-service teacher education. The target audience is scholars working in the fields of pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book.

Most students, regardless of their major, need to understand information systems and technologies and their importance to the success of business organizations. While many of today's students have lived with technology their whole lives, they do not see the connection between what they use every day and what they need to understand to be successful in the business world. Introduction to Business Information Systems, Third Canadian Edition by James Norrie, Michelle Nanjad and Mark Huber focuses on IT as a source of business value and outlines

the innovative technologies, as well as the innovative ways to use technology, that help businesses excel. The goal of this book is to teach students that the effective integration of IS with knowledge can drive the creation of significant business value.

Introduction to Business Information Systems, Third Canadian Edition is written for both the IT and non-IT major. It is written in a friendly, accessible style that will draw students in and engage them with the content. Expanded coverage of highly technical concepts is included in the Technology Core box found in each chapter as well as the

Research in macroeconomics in the last thirty years has featured, almost exclusively on two characteristics: an emphasis on the microfoundations of macroeconomics and secondly, intertemporal economics, that is, the behavior of economic actors over time. Curiously, textbooks in intermediate macroeconomics have been very slow to adopt

these traits. The aim of this book is to bring intermediate instruction in macroeconomics fully into line with the direction taken by the research community. Key hallmarks of the text include: a full introduction to the microfoundations of consumption and investment a complete model of the labor market with profit maximization for firms to determine labor demand and a utility maximization model to determine labor supply an analysis of the Baumol-Tobin model to determine money demand accompanied by a discussion of traditional money supply Possessing a full range of additional

learning features including a companion website, test bank and instructor's manual, the book takes an international view of macroeconomics with case studies and examples from the United States and beyond.

Money Talks explores the ways the financial concepts of money and capital are understood and talked about by a range of people, from traders to ordinary investors, and how these accounts are framed and represented across a range of media. This collection brings together leading writers and emerging researchers to demonstrate how work in media

and cultural studies can contribute to debates around the meanings of money, the operations of capital, and the nature of the current crisis. Drawing on a range of work from across disciplines, *Money Talks* offers a provocative and path-breaking demonstration of the value of incorporating approaches from media and cultural studies into an understanding of economic issues.
