Millions of people live with cirrhosis of the liver, a degenerative, complex, and often misunderstood condition in which liver cells are damaged and then replaced by scar tissue, impeding liver function. The disease is most commonly caused by excessive alcohol consumption, hepatitis, or complications from prescription drugs. The liver is the second largest organ in the body and it functions to get rid of harmful substances from the blood, processes foods and drinks that we eat amidst many other complex functions. Many other organs of the body rely on the liver's perfect well being to function accordingly. In the world today, the fatty liver is a subtle health condition which
