We are delighted to introduce the proceedings of the 1st International Conference on Engineering, Science, and Commerce (ICESC 2019). Tourism is one of the fastest growing industries and contributes a great deal to economies around the world. However, it is inevitable that activities in the development of the tourism industry have caused many problems both in local culture and the environment. What is the role of Engineering, Science, and Commerce to support Sustainable Tourism? This conference has brought researchers, academicians and practitioners to contribute to the body of knowledge and practical problem solving from the field of engineering, science, and technology that are relevant to support sustainable tourism. Engineering papers focused on the role of renewable energy, information technology, civil and mechanical engineering researches that support sustainable tourism. In the field of science, the papers discussed achievements of the latest technology in finding environmentally friendly products. The role of business and accounting systems to support the sustainable tourism was indicated by more than 20 papers. We hope that the proceedings will be an exceptional source for readers who concern to the impacts of the development of tourism on natural resources, consumption patterns, pollution and social systems.

Teknik pantai adalah sebuah ilmu yang tua, seusia dengan peradaban manusia. Pada mulanya berkembang karena kebutuhan manusia untuk berpindah dari pulau ke pulau dengan membangun pelabuhan. Berlanjut untuk kebutuhan militer pada Perang Dunia II maka dikembangkan teori gelombang, pasang surut, difraksi, dasar perletakan struktur pantai dan pondasinya untuk mendukung invasi Normandia. Kemudian melihat signifikansi perkembangan pantai untuk mendukung kesejahteraan umat manusia dan permasalahan pantai yang perlu untuk dicari solusinya, sehingga teknik pantai terus dikembangkan hingga sekarang.

Has anyone ever asked you—What were the best days of your life? That one period of your life you always wanted to go back to? And live that life . . . one more time? When asked this, I closed my eyes and went back in my own past. And I thought of the days, when life's

most complex choices had a simple solution of Akkad Bakkad Bambey Bo! . . . of the seasons when rains were celebrated by making paper boats. . . . of the times when waiting at the railway crossing meant counting the bogies of the train passing by. When I opened my eyes, it seems Like it Happened Yesterday! Like it was yesterday that I broke my first tooth and fell in love for the first time. Like it was yesterday, when I was about to lose my friend, and suddenly he became my best friend. I look back and it becomes a journey full of adventure. It makes me laugh, it makes me cry and I know I ' m here because I was . . . Come, hold my hand, and take this trip with me. It will be yesterday for you, once again!

Digital technology opens up extraordinary fields for applications that will deeply change the nature of jobs and trade, the very concept of work and the expectations of user–producers. The “ masters of algorithms ” have disrupted production and services, and this trend will continue for as long as electric energy and the elements of Industry 4.0 are in continued development. Beyond data control, a power struggle is working its way through the links in the value chain: intermediation, control of resources and command over human and physical networks, as well as partnerships, creativity and the political system. Industry 4.0: Paradoxes and Conflicts examines the need for a serious and technological review, as well as for research and training regarding citizenship and politics. This is a new situation in terms of relationships of competence and authority, which must be the subject of scientific as well as political reflections for the whole social body, which needs to be educated about choices. Throughout the book, the author poses the following question: instead of submitting to choices, would it not be better to exercise foresight?

Energy dissipators are an important element of hydraulic structures as transition between the highly explosive high velocity flow and the sensitive tailwater. This volume examines energy dissipators mainly in connection with dam structures and provides a review of design methods. It includes topics such as hydraulic jump, stilling basins, ski jumps and plunge pools. It also introduces a general account of various methods of dissipation, as well as the governing flow mechanisms.

Experienced product designers are increasingly expected to be adept at incorporating a range of components into their designs. Students and experimenters too need to look beyond basic circuits and devices to achieve adequate design solutions. For those experienced in engineering design, this is the guide to electric motors. This book will allow engineers and designers to marry the technologies they know about with motor technology, and hence to incorporate motors into their products. Of the many good books on motors, such as Electric Motors and Drives by Hughes, none offer the engineering professional a tailored guide to motors taking into account their expertise. This book fills that gap. Irving Gottlieb is a leading author of many books for practising engineers, technicians and students of electronic and electrical engineering. Practical approach with minimum theory Covers a core area ignored by many electronics texts Shows how to incorporate motors into electronic products

Now that modern machinery and electromechanical devices are typically being controlled using analog and digital electronics and computers, the technologies of mechanical engineering in such a system can no longer be isolated from those of electronic and computer engineering. Mechatronics: A Foundation Course applies a unified approach to meet this

NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT--OVERSTOCK SALE --Significantly reduced list price while supplies last The Erosion and Sedimentation Manual provides a comprehensive coverage of subjects in nine chapters (i.e., introduction, erosion and reservoir sedimentation, noncohesive sediment transport, cohesive sediment transport, sediment modeling for rivers and reservoirs, sustainable development and use of reservoirs, river process and restoration, dam decommissioning and sediment management, and reservoir surveys and data analysis). Each chapter is self-contained, with cross references of subjects that are discussed in different chapters of this manual. The manual also includes a list of commonly used notations used in the erosion and sedimentation literature, conversion factors between the Imperial and metric units, physical properties of water, and author and subject indexes for easy reference. Each chapter has a list of reference for readers who would like to seek out more detailed information on specific subjects. Audience The manual would be useful for researchers, university professors, graduate students, geologists, hydrographic survey analysts, municipal and state water research specialists, and engineers in solving erosion and sedimentation problems.
