Hailed as one of the greatest novels of all time and a classic of world literature, *War and Peace* is a tale of strivers in a world fraught with conflict, social and political change, and spiritual confusion, Tolstoy's magnificent work continues to entertain, enlighten, and inspire readers around the world. Both an intimate study of individual passions and an epic history of Russia and its people, 'War and Peace' is nothing more or less than a complete portrait of human existence. Among its many unforgettable characters is Prince Andrey Bolkonsky, a proud, dashing man who, despising the artifice of high society, joins the army to achieve glory. Badly wounded at Austerlitz, he begins to discover the emptiness of everything to which he has devoted himself. His death scene is considered one of the greatest passages in Russian literature. Terror swiftly engulfs the country as Napoleon's army marches on Russia, and the lives of three young people are changed forever. The stories of quixotic Pierre, cynical Andrey and impetuous Natasha interweave with a huge cast, from aristocrats and peasants, to soldiers and Napoleon himself. In *War and Peace* (1868-9), Tolstoy entwines grand themes—conflict and love, birth and death, free will and fate.

A Textbook on Maritime History, Leadership, and Nautical Sciences for the NJROTC Student

Mammals are the so-called "pinnacle" group of vertebrates, successfully colonising virtually all terrestrial environments as well as the air (bats) and sea (especially pinnipeds and cetaceans). How mammals function and survive in these diverse environments has long fascinated mammalogists, comparative physiologists and ecologists. Ecological and Environmental Physiology of Mammals explores the physiological mechanisms and evolutionary necessities that have made the spectacular adaptation of mammals possible. It summarises our current knowledge of the complex and sophisticated physiological approaches that mammals have for survival in a wide variety of ecological and environmental contexts: terrestrial, aerial, and aquatic. The authors have a strong comparative and quantitative focus in their broad approach to exploring mammal ecophysiology. As with other books in the Ecological and Environmental Physiology Series, the emphasis is on the unique physiological characteristics of mammals, their adaptations to extreme environments, and current experimental techniques and future research directions are also considered. This accessible text is suitable for graduate level students and researchers in the fields of mammalian comparative physiology and physiological ecology, including specialist courses in mammal ecology. It will also be of value and use to the many professional mammalogists requiring a concise overview of the topic.
