Representing the largest expansion between editions, this updated volume of Otmiller's Index to Plays in Collections is the standard location tool for full-length plays published in collections and anthologies in England and the United States throughout the 20th century and beyond. This new volume lists more than 3,500 new plays and 2,000 new authors, as well as birth and/or death information for hundreds of authors.

This stimulating collection of articles from leading international researchers provides a state-of-the-art overview of core issues in second language speech perception and production. Aimed at phoneticians, speech scientists, psycholinguists, applied linguists, and pedagogical specialists, it presents engaging discussions of fundamental problems and controversies within the field, as well as new empirical findings arising from a variety of methodological approaches. Its twenty chapters, inspired by the ground-breaking work of James E. Flege, address such topics as the theoretical underpinnings of second language speech learning; the nature and etiology of foreign accents; the effects of age, experience, and training; speech intelligibility; and the acquisition of vowels, consonants, tone, and prosody. This volume will serve as a valuable resource, not only for researchers, but for anyone wishing to gain an understanding of an area of linguistics that is rapidly growing in importance.
