Through a collection essays by leading scholars in international environmental law from around the world, this book explores the future of international environmental law in a world of ever worsening environmental crises. It examines the success stories and the failures of international environmental law and argues that future responses to global environmental crisis will be more about good environmental governance rather than just more treaties and laws. Environmental governance in future will need to accommodate the needs and aspirations of peoples from developed and developing countries alike and will have to be based on decisions and actions by a vast range of actors and stakeholders and not just the nation state that has traditionally dominated environmental diplomacy to date. In future this also suggests a need to be cognizant of the close links to other areas of international law including human rights.

The book also describes contemporary negotiations about how, and even whether, to clarify and strengthen the norms that guide us today. By providing a clear picture of the competing trajectories of the current state of the law and our environment, this book equips readers with the knowledge and confidence to shape the future evolution of international environmental law.

Each chapter includes charts summarising the main components of the relevant legal frameworks and provides a detailed bibliography. Suitable for practicing and academic international lawyers who want an accessible, up-to-date introduction to contemporary international environmental law, as well as non-lawyers seeking a concise and clear understanding of the subject.
