This book will systematically cover all the main topics involved in the current practice of a cardiac surgeon. It will incorporate current guidelines for practice (such as from the American Heart Association and European Society of Cardiology) and up-to-date information based on current literature. All the chapters have been written by cardiac surgeons who have recently undertaken their Cardiothoracic Board / Specialty Exit examinations and reviewed by a cardiothoracic examiner of the Royal College of Surgeons of England. Each chapter will be structured to include aetiology, pathophysiology, clinical features, indications for surgery, peri-operative management, surgical options and postoperative care. Possible complications will be discussed and the results of current practice presented. Importantly there will be a section on basic sciences related to the practising cardiac surgeon and a further section on cardiac investigations with many images illustrating the variety of pathologies. Each chapter will also contain important references for further reading and greater depth of knowledge. The data and body

of knowledge presented in this book is strictly evidence-based and is relevant to all cardiac surgical trainees, at any stage of their training programme. It will provide interns, residents and specialist registrars the necessary information to carry out their daily duties. Adult cardiologists and cardiothoracic intensive care unit specialists will also find the book useful in terms of the indications and surgical management of these patients, as they are integral to the cardiac surgical process. Another important group is the nursing staff, physiotherapists and other professions allied to medicine, both surgical and cardiological, working with patients with adult cardiac disease either pre-operatively or postoperatively, as it will help to give a detailed understanding of the principles surrounding adult cardiac surgical disease. Most importantly, the book is ideal as a revision aid for residents/registrar undertaking their Cardiothoracic Surgery Board examinations around the world. Although these examinations vary in format in different countries, this book is applicable to all cardiothoracic surgical trainees. Its concise, yet complete coverage of the important topics, make it the ideal guide to answer the key questions in cardiac surgery that are asked within the confines of an examination.

This book systematically covers all the main topics involved in the current practice of a congenital cardiac surgeon. It incorporates current guidelines for practice and up-to-date information based on current literature. Each chapter includes the etiology, pathophysiology, clinical features, indications for surgery, peri-operative management, surgical options and postoperative care.

Following on from the success of the international best-seller "Key Questions in Cardiac Surgery", the long-awaited "Key Questions in Thoracic Surgery" will be the next book in the Key Questions series to be released. This book will systematically cover all the main topics involved in the current practice of a thoracic surgeon. It will incorporate current guidelines for practice (such as from the American College of Chest Physicians, British Thoracic Society and European Respiratory Society) and up-to-date information based on current literature. Each chapter will be structured to include aetiology, pathophysiology, clinical features, indications for surgery, perioperative management, surgical options and postoperative care. Possible complications will be discussed and the results of current practice presented. Cardiac Surgery Essentials for Critical Care Nursing, Third Edition is an indispensable resource for new and experienced nurses caring for patients in critical care units immediately following cardiac surgery and in the transitioning to home. With an evidence-based foundation, the Third Edition addresses nursing knowledge to meet the needs of acutely ill patients and strategies to optimizing patient outcomes in this dynamic field. Vital information has been added and updated to reflect significant changes in cardiac surgery as well as four new chapters based on needs of patients, families, and readers. These new chapters address nutritional issues, post ICU-care, psychological and spiritual support, and rehabilitation care post cardiac surgery.

Cardiothoracic Surgery covers all areas of adult and paediatric, cardiac and thoracic surgery and intensive care. This new edition, with updated cardiac surgery and thoracic sections, provides on-the-spot guidance to common and less common operative procedures. Every chapter is divided into topics presented across two pages to enable easy reference, with pages on intensive care edged in red for immediate access. Completely updated with current evidence and guidelines, the book is practically oriented to provide reliable guidance in intensive care and in theatre. Fully indexed and lavishly illustrated, the book is a must for anyone seeking a comprehensive yet portable guide to all areas of cardiothoracic surgical practice.

This first edition of Single Best Answer Questions in Cardiothoracic Surgery provides a comprehensive revision aid to the candidates taking the specialty examination in Cardiothoracic Surgery world-wide. This new revision aid provides over 300 single best answer practice questions in Cardiothoracic Surgery and conforms to the recent changes in the format of specialty examinations in Cardiothoracic Surgery. Each question has been carefully formulated to cover an important topic in cardiothoracic surgery. The questions cover the complete specialty examination syllabus and a considerable number of these have been based on previous examination questions. This book contains a substantial number of patient-based questions or clinical vignettes that will enable prospective candidates to test their ability to integrate key basic science concepts with relevant clinical problems. In addition factual recall questions have also been included that probe for basic recall of facts. Detailed and comprehensive explanations, rather than just brief answers, to questions have been provided so that the candidates do not have to consult textbooks for clarification as is the case with most other MCQs books currently available in the market. A list of relevant references is provided at the end of each answer to enable candidates to read the most up to date journal articles on the subject. The questions in this book can be used in a number of ways: (1) as a diagnostic tool (pretest), (2) as a guide and focus for further study, and (3) for self-assessment. The least effective use of these questions is to study them by reading them one at a time, and then looking at the correct response. These over 300 practice questions are intended to be an integral part of a well-planned review as well as an isolated resource. If used appropriately,

these questions can provide self-assessment information beyond a numeric score. Furthermore, the questions have been planned in such a way that this book can be used as companion to any textbook of Cardiothoracic Surgery.

Key Topics in Cardiac Surgery includes every current topic central to the modern practice of cardiac surgery. The systematic and structured format of the book make it an ideal revision aid for postgraduate trainees in cardiac surgery preparing for certification and fellowship examination. To ensure the content is suitable for this purpose, each top

This textbook provides a succinct overview of cardiac surgery, with key concepts being emphasized throughout. An abundance of illustrations, intra-operative photographs, tables as well as information boxes, aids the reader to visualise, grasp and retain difficult concepts. The inclusion of evidence-based approaches to the management of a range of cardiac surgical conditions equips the reader with an understanding of how to overcome a variety of potentially tough clinical challenges. Concise Cardiac Surgery: A Complete Guide comprehensively covers a range of techniques used in cardiac surgery. It is therefore, an ideal resource for the trainee and practising cardiac surgeon seeking a practically focused text detailing how to apply the latest techniques and evidence-based approaches in their day-to-day practice.
