GSX-R1000 (2005-2006)

At thirty-two, Marine Vandale is still waiting for true love. The kind of love that takes your breath away, knocks you on the ground, and makes you scared and crazy all at once. "You're certainly not going to find it if you spend all your time with three guys," her mother likes to remind her. It's just that Marine, her ex Laurent, Jeff her roommate, and their best friend Julien are inseparable. Together, they're trying to navigate the troubled waters of their thirties, become real adults and tame love. But what used to seem like child's play is becoming less and less of a game, and today's mistakes are not as meaningless as the ones they made in their twenties. But each one in his or her own way continues to hope. And from date to date, from man to man, through a thousand situations she describes as "summer stock theatre," Marine persists in believing that one day she'll prove to her mother that you can't fight love.

Analytical Dynamics presents a fair and balanced description of dynamics problems and formulations. From the classical methods to the newer techniques used in today's complex and multibody environments, this text shows how those approaches complement each other. The text begins by introducing the reader to the basic concepts in mechanics. These concepts are introduced at the particle mechanics level. The text then extends these concepts to systems of particles, rigid bodies (plane motion and 3D), and lightly flexible bodies. The cornerstone variational principles of mechanics are developed and they are applied to particles, rigid bodies, and deformable bodies. Through this approach, students are exposed to a natural flow of the concepts used in dynamics.
