Updated with recent New York State regents exams, this classroom supplement covers logic and mathematical systems, polynomials, linear and quadratic equations, operations with algebraic fractions, proofs in geometry and logic, trigonometry of the right triangle, analytic and transformation geometry, and probability and combinations.

Updated with recent New York State regents exams, this classroom supplement covers logic and mathematical systems, polynomials, linear and quadratic equations, operations with algebraic fractions, proofs in geometry and logic, trigonometry of the right triangle, analytic and transformation geometry, and probability and combinations.

Books in this series have been completely revised and brought up to date to reflect recent large-scale changes in New York State's High School Regents exams. Let's Review books have been especially designed to prepare students for Regents finals in New York, but also make fine textbook supplements that can be used in high schools everywhere. In addition to subject reviews, each title contains either model exams or actual recent Regents exams with answers. Many teachers prefer to use Let's Review book as classroom companion texts to Barron's Regents Exams and Answers books. This new edition and its exam material replaces all of the former Sequential Math I and the first half of Sequential Math II exams. There are 3 practice tests with answers.

This two-volume package is made up of the new edition of Let's Review Sequential math II and Barron's Regents Exams and Answers book in that subject--a \$2.95 list-price savings over separate purchases of each book.

Reflecting the latest New York State curriculum change, this brand-new addition to Barron's Let's Review series covers all topics prescribed by the New York State Board of Regents for the new Integrated Algebra Regents exam, which replaces the Math A Regents exam. This book stresses rapid learning, using many step-by-step demonstration examples, helpful diagrams, enlightening “Math Fact” summaries, and graphing calculator approaches. Fourteen chapters review the following topics: sets, operations, and algebraic language; linear equations and formulas; problem solving and technology; ratios, rates, and proportions; polynomials and factoring; rational expressions and equations; radicals and right triangles; area and volume; linear equations and graphing; functions, graphs, and models; systems of linear equations and inequalities; quadratic and exponential functions; statistics and visual representations of data; and counting and probability of compound events. Exercise sections within each chapter feature a large sampling of Regents-type multiple-choice and extended response questions, with answers at the back of the book. Students will find this book helpful when they need additional explanation and practice on a troublesome topic, or when they want to review specific topics before taking a classroom test or the Regents exam. Teachers will value it as a lesson-planning aid, and as a source of classroom exercises, homework problems, and test questions.

Thirteen course II exams and one Math B sample exam. Questions with explained answers, step-by-step solutions with explanations, test-taking and calculator tips, 66 practice questions, formulas and glossary.

This brand new Regents review “Redbook” conforms to the new Regents Math B curriculum taught in secondary schools throughout New York State. The new Math B exam covers topics that until recently were included in portions of the old Sequential Math Course II and all of the Sequential Math Course III. However, the entire math curriculum has been restructured, and this book reviews all Math B requirements and topics through step-by-step solutions to actual and simulated test questions. Includes graphing calculator skills and test-taking tips. Four full-length exams are included: the Regents Sample Math B test plus the exams that were given in June and August of 2001 and in January 2002.

Barron's Math 360: Pre-Calculus is your complete go-to guide for everything pre-calculus This comprehensive guide is an essential resource for: High school and college courses Homeschooling Virtual Learning Learning pods Inside you'll find: Comprehensive Content Review: Begin your study with the basic building blocks of pre-calculus and build as you go. Topics include, algebraic methods, functions and graphs, complex numbers, polynomial and rational functions, and much more. Effective Organization: Topic organization and simple lesson formats break down the subject matter into manageable learning modules that help guide a successful study plan customized to your needs. Clear Examples and Illustrations: Easy-to-follow explanations, hundreds of helpful illustrations, and numerous step-by-step examples make this book ideal for self-study and rapid learning. Practice Exercises: Each chapter ends with practice exercises designed to reinforce and extend key skills and concepts. These checkup exercises, along with the answers and solutions, will help you assess your understanding and monitor your progress. Access to Online Practice: Take your learning online for 50 practice questions designed to test your knowledge with automated scoring to show you how far you have come.

This major revision prepares students to succeed on the New York State Math A Regents Exam as it is now given. The book places increased emphasis on use of the graphing calculator, and in line with New York State Regents core curriculum, it shows how given problems can be solved in several different ways. The author also includes new Regents question types dealing, for instance, with motion problems and mathematical systems defined by tables. New contextualized word problems further enhance the presentation. The totally rewritten chapter on problem-solving offers students a core set of strategies that apply to a variety of curriculum-related exercises. In addition to subject review, demonstration examples, and practice exercises with answers, the book includes several complete recent Math A Regents exams with answers.
