The ESC Textbook of Intensive and Acute Cardiovascular Care is the official textbook of the Acute Cardiovascular Care Association (ACVC) of the ESC. Cardiovascular diseases (CVDs) are a major cause of premature death worldwide and a cause of loss of disability-adjusted life years. For most types of CVD early diagnosis and intervention are independent drivers of patient outcome. Clinicians must be properly trained and centres appropriately equipped in order to deal with these critically ill cardiac patients. This new updated edition of the textbook continues to comprehensively approach all the different issues relating to intensive and acute cardiovascular care and addresses all those involved in intensive and acute cardiac care, not only cardiologists but also critical care specialists, emergency physicians and healthcare professionals. The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment as well as organisational issues, cooperation among professionals, and interaction with other specialities in medicine. SECTION 1 focusses on the definition, structure, organisation and function of ICCU's, ethical issues and quality of care. SECTION 2 addresses the pre-hospital and immediate in-hospital (ED) emergency cardiac care. SECTIONS 3-5 discuss patient monitoring, diagnosis and specific procedures. Acute coronary syndromes (ACS), acute decompensated heart failure (ADHF), and serious arrhythmias form SECTIONS 6-8. The main other cardiovascular acute conditions are grouped in SECTION 9. Finally SECTION 10 is dedicated to the many concomitant acute non-cardiovascular conditions that contribute to the patients' case mix in ICCU. This edition includes new chapters such as low cardiac output states and cardiogenic shock, and pacemaker and ICDs: troubleshooting and chapters have been extensively revised. Purchasers of the print edition will also receive an access code to access the online version of the textbook which includes additional figures, tables, and videos to better illustrate diagnostic and therapeutic techniques and procedures in IACC. The third edition of the ESC Textbook of Intensive and Acute Cardiovascular Care will establish a common basis of knowledge and a uniform and improved quality of care across the field.

This new fourth edition of the Nutrition and Diet Therapy Reference Dictionary covers all aspects of nutrition, including assessment of drug-nutrient interactions, laboratory interpretations, enteral and parenteral nutrition support, community and public health nutrition programs, nutrition throughout the life cycle, and such topics as nutrition and the immune system, nutrition labeling, chemical dependency, AIDS, and organ transplantation. Special features of the Dictionary are entries on 130 different diets (listed under D); nutrition therapy for more than 350 disorders, including inborn errors of metabolism; 145 drugs and their effects on nutrition; and more than 150 nutritional products with their main uses and composition. Of particular importance are topics of public health concerns for the 1990s and the year 2000, and dietary recommendations for prevention of major degenerative diseases such as obesity, coronary heart disease, hypertension, diabetes mellitus, and cancer. With more than 3000 carefully selected entries, the new Fourth Edition includes 380 new terms and more than 600 revised and expanded definitions. In choosing the words to be entered and defined, the authors used as their criterion the frequency of use or importance of a term in relation to nutrition. Definitions are cross-referenced to other word entries and the materials found in the Appendix to provide further details and information. All practitioners in the fields of nutrition and dietetics, as well as educators, students, and others interested in nutrition will find this handy desk reference particularly useful. It is easy-to-use and provides instant access to nutrition information.
