This section of the Conservation Information Resource for Civil Engineers (CIRCE), provides guidance on all types of construction materials that civil and building engineers are likely to encounter when working on conservation, restoration and extending the life of existing structures. Each sub-section provides links to information and guidance about the characteristics and properties of the materials, to methods and approaches for inspecting, assessing and appraising materials and, finally ...

A construction material is any material  
used in the construction industry.

Examples: Concrete, cement, soil,  
stones, aggregates, plastics, and  
asphalt. The basic materials used in  
civil engineering applications or in  
construction projects are: Wood

Role of a civil engineer is vital for construction project. Here, we have restricted the role of civil engineer up to house construction only. The activities carried out in construction works (of a house here) are highly dynamic in nature. Sometimes unexpected decisions and actions have to be taken spontaneously on construction site.

The authors cover the various materials used by civil and construction engineers in one useful reference, limiting the vast amount of information available to the introductory level, concentrating on current practices, and extracting information that is relevant to the general education of civil and construction engineers. A large number of experiments, figures, sample problems, test methods, and homework problems gives students opportunity for practice and review.

The construction of buildings and structures relies on having a thorough understanding of building materials. Without this knowledge it would not be possible to build safe, efficient and long-lasting buildings, structures and dwellings. Building materials in civil

Engineering provides an overview of the complete range of building materials available to civil engineers and all those involved in the building and construction industries. The book begins with an introductory chapter describing the basic properties of building materials. Further chapters cover the basic properties of building materials, air hardening cement materials, cement, concrete, building mortar, wall and roof materials, construction steel, wood, waterproof materials, building plastics, heat-insulating materials and sound-absorbing materials and finishing materials. Each chapter includes a series of questions, allowing readers to test the knowledge they have gained. A detailed appendix gives information on the testing of building materials. New Materials in Civil Engineering provides engineers and scientists with the tools and methods needed to meet the challenge of designing and constructing more resilient and sustainable infrastructures. This book is a valuable guide to the properties, selection criteria, products, applications, lifecycle and recyclability of advanced materials. It presents an A-to-Z approach to all types of materials, highlighting their key performance properties, principal characteristics and applications. Traditional materials covered include concrete, soil, steel, timber, fly ash, geosynthetic, fiber-reinforced concrete, smart materials, carbon fiber and reinforced polymers. In addition,
