It is generally accepted that information and communication technology has the potential to support high quality, high-tech medicine, but up to now healthcare has lagged behind other sectors, such as service industries, in the implementation of such technology. Medicine is now beginning to catch up, however, and the Austrian government recently agreed on the nationwide implementation of an Electronic Health Record (Elektronische Gesundheitsakte (ELGA)).\_x000D\_ This book presents the proceedings of the 8th scientific eHealth conference, which is being held in Vienna, Austria, in the context of the eHealth Summit Austria, in April 2014. The theme of the conference is "Outcomes Research: The Benefit of Health-IT", addressing the challenges which will inevitably accompany the new opportunities offered by the increased use of ICT in healthcare. The history of technologies making the transition from the laboratory into practice is one of mixed success. It is vital to understand what makes such an implementation a positive one, and factors such as the needs, fears, and context of potential users are as important as a sound technical implementation. Priorities may need to be rethought and new dimensions added.\_x000D\_ The book will be of interest to all those considering the effect of new technologies and eHealth on the provision of healthcare systems, and seeking to achieve services which are both technically and organizationally sound and which will also efficiently deliver noticeable benefits for users.

Find your next career with COMPARATIVE HEALTH INFORMATION MANAGEMENT, 4e. Updated for the fourth edition, this book explores a variety of professional settings where opportunities abound, including hospitals, ambulatory clinics and medical offices, veterinary practices, home health, long-term care, and correctional facilities, as well as emerging practice areas in consulting and cancer registry. Focused on the challenges of managing and protecting the flow of information across sites, chapters introduce the health care system today, and then delve into specifics of the many HIM roles available to you, enhancing discussions with key terms, self-test questions, web links, and more to add meaning to concepts. Additional features include realistic case studies to help you solve problems, and new "Professional Spotlight" vignettes for an inside view of actual professionals in their HIM careers. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Updated for 2010, this book will be the primary textbook for CPT/HCPCS coding courses for Health Information Management (HIM), Medical Billing Insurance and Coding (MBIC), Health Information Technology (HIT) and Health Administration Services (HSA) programs. Using a template similar to our Learning to Code with ICD-9-CM textbook, this new book teaches students how to code with CPT/HCPCS using real world medical record examples. The robust online course accompanying the book has additional activities to supplement the textbook, and is available for WebCT, Blackboard, and LWW thePoint.
