Drawing from the author's vast experience as teacher, researcher, and practitioner, Lawrence Shulman's DYNAMICS AND SKILLS OF GROUP COUNSELING equips students in the helping professions with a solid introduction to methods for effective group counseling. Guided by theory, empirical research, years of teaching experience, his own group practice, and the wisdom of colleagues, Shulman's text brings concepts to life with vivid cases that include Record of Service reports and dialogue from actual groups. These illustrative examples connect theory to current practice and address the day-to-day realities of leading counseling groups. Extremely practical, the book presents students with a clear format on how to run a group built around four phases of work: the preliminary (preparatory) phase; the beginning (contracting) phase; the middle (work) phase; and the ending and transition phase. Recognizing the broad applications of these methods, the latter part of the text shows how these lessons can be applied to a wide range of settings. Reflecting the latest research and practices, DYNAMICS AND SKILLS OF GROUP COUNSELING delivers an insightful, authoritative, and comprehensive introduction to the field. The main aim of this practical Handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. The MNH Counselling Handbook is chiefly designed to be used by groups of SAs with the help of a facilitator. It can also be used by individual SAs who can get together with colleagues for discussions and activities where needed. It relies on a self-directed learning approach, allowing SAs to work at their own pace, drawing on their past counselling experience. The way it is used will be determined by each country s context, and the SAs preference. The MNH Counselling Handbook is divided into three main sections. Part 1 is an introduction which describes the aims and objectives and the general layout of the Handbook. Part 2 describes the counselling process and outlines the six key steps to effective counselling. It explores the counselling context and factors that influence this context including the socio-economic, gender, and cultural environment. A series of guiding principles is introduced and specific counselling skills are outlined. Part 3 focuses on different maternal and newborn health topics, including general care in the home during pregnancy; birth and emergency planning; danger signs in pregnancy; post-abortion care; support during labour; postnatal care of the mother and newborn; family planning counselling; breastfeeding; women with HIV/AIDS; death and bereavement; women and violence; linking with the community. Each Session contains specific aims and objectives, clearly outlining the skills that will be developed and corresponding learning outcomes. Practical activities have been designed to encourage reflection, provoke discussions, build skills and ensure the local relevance of information. There is a review at the end of each session to ensure the SAs have understood the key points before they progress to subsequent sessions.

"I worked in a trailer that ICE had set aside for conversations between the women and the attorneys. While we talked, their children, most of whom seemed to be between three and eight years old, played with a few toys on the floor. It was hard for me to get my head around the idea of a jail full of toddlers, but there they were." For decades, advocates for refugee children and families have fought to end the U.S. government's practice of jailing children and families for months, or even years, until overburdened immigration courts could rule on their claims for asylum. Baby Jails is the history of that legal and political struggle. Philip G. Schrag, the director of Georgetown University's asylum law clinic, takes readers through thirty years of conflict over which refugee advocates resisted the detention of migrant children. The saga began during the Reagan administration when 15-year-old Jenny Lisette Flores languished in a Los Angeles motel that the government had turned into a makeshift jail by draining the swimming pool, barring the windows, and surrounding the building with barbed wire. What became known as the Flores Settlement Agreement was still at issue years later, when the Trump administration resorted to the forced separation of families after the courts would not allow long-term jailing of the children. Schrag provides recommendations for the reform of a system that has brought anguish and trauma to thousands of parents and children. Provocative and timely, Baby Jails exposes the ongoing struggle between the U.S. government and immigrant advocates over the duration and conditions of confinement of children who seek safety in America.

Attachment theory is influencing how we understand interpersonal relationships and how psychotherapy can help facilitate change for those struggling in relationships. More recently, researchers and clinicians have applied attachment theory to group treatment, one of the most effective forms of psychotherapy to address interpersonal difficulties. This book highlights some of the bridges between attachment theory and contemporary approaches to group treatment. In addition to applying attachment theory to innovative treatments, each chapter addresses a specific way in which attachment impacts the members' capacity for empathy and perspective taking; the development of cohesion in the group; the automatic fight-flight response during group interactions; members' ability to tolerate diversity; and the leaders' capacity to foster safety within the group. This book will help group leaders gain a richer understanding of attachment theory and attachment based techniques that will ultimately benefit their groups. This book was originally published as a special issue of the International Journal of Group Psychotherapy.
