S.M.A.R.T. is a monitoring system included in computer hard disk drives, solid-state drives, and eMMC drives. Its primary function is to detect and report various indicators of drive reliability with the intent of anticipating imminent hardware failures. When S.M.A.R.T. data indicates a possible imminent drive failure, software running on the host system may notify the user so preventive action can be taken to prevent data loss, and the failing drive can be replaced and data integrity maintained

Used in laptop and desktop computers, low-end servers, and mobile devices, Serial ATA (Advance Technology Attachment), or SATA, is the pervasive disk storage technology in use today. SATA has also penetrated the enterprise computing environment by adding hardware components for fail-over, extending command processing capabilities, and increasing device performance and link speeds. If you work in a data center or manage your company's storage resources, you will likely encounter storage solutions that require SATA software or hardware. In this book, leading storage networking technologist David Deming presents a comprehensive guide to designing, analyzing, and troubleshooting any SATA or SATA Express (SATAe) storage solution. Written by an engineer, this book is for those who aren't afraid of

digging into the technical details. It explains how SATA/SATAe powers data center applications and how it influences and interacts with all protocol layers and system components. This book covers all of the tasks associated with installing, configuring, and managing SATA/SATAe storage applications. If you are a test engineer, design engineer, system architect, or even a technically skilled gamer who likes to build your own systems, this book will answer your technical questions about SATA/SATAe. With this book, you should have everything you need to implement a SATA or SATAe storage solution.

Why is my disk so slow? How important it is to set work parameters of the external device with the system is known to every computer user. According adjustment of the system work parameters with the hard drive can be the reason why hardware exchange is not necessary.
