Paradoxismul este o mi?care interna?ional? de avangard? în literatur?, art?, filozofie, chiar ?i în ?tiin??. bazat? pe folosirea excesiv? de antiteze, antinomii, contradic?ii, oximorone, parabole, invers?ri sau devieri de sensuri, interpret?ri de la figurativ la propriu, paradoxuri etc. în crea?ie. A fost înfiin?at de c?tre scriitorul, artistul ?i omul de ?tiin?? Florentin Smarandache, în anii 1980, în România, dorind l?rgirea sferei artistice prin elemente neartistice ?i prin experimente contradictorii; în special crea?ie în contra-timp, contra-sens. Primul manifest paradoxist a fost publicat în limba francez?, în anul 1983, în prima carte paradoxist?, Le Sens du Nonsens / Sensul Nonsensului, ap?rut? în Maroc. Ini?iatorul paradoxismului împreun? cu Andru?a R. V?tuiu propun acum publicului exprimarea paradoxismului în sociologie.

Talking to My Mum is an activity pack for five-eight-year-olds whose families have experienced domestic abuse to help and encourage them to open up to their mothers about their distressing experiences. Based on the authors' work with families who have experienced domestic abuse, the book is full of illustrated worksheets featuring animal characters who encourage the young reader to explore a range of memories, such as changes in the family's living arrangements or happy memories with siblings or favourite toys that each prompt a particular emotion. These activities are accompanied by guidance on how to use them appropriately. Talking to My Mum is designed for children and their mothers to complete together, and will assist both child and mother with improving communication about the past, present and future. This activity pack will be an essential tool for families with children who have lived through domestic abuse, as well as social workers and other professionals working with them.

"Bracing and immediate." - The Washington Post Once at the center of the American conservative movement, bestselling author and radio host Charles Sykes is a fierce opponent of Donald Trump and the right-wing media that enabled his rise. In How the Right Lost Its Mind, Sykes presents an impassioned, regretful, and deeply thoughtful account of how the American conservative movement came to lose its values. How did a movement that was defined by its belief in limited government, individual liberty, free markets, traditional values, and civility find itself embracing bigotry, political intransigence, demagoguery, and outright falsehood? How the Right Lost its Mind addresses: \*Why are so many voters so credulous and immune to factual information reported by responsible media? \*Why did conservatives decide to overlook, even embrace, so many of Trump's outrages, gaffes, conspiracy theories, falsehoods, and smears? \*Can conservatives govern? Or are they content merely to rage? \*How can the right recover its traditional values and persuade a new generation of their worth?

'Statistics Without Maths for Psychology' provides an accessible description of key statistical concepts and techniques needed by psychology students, avoiding as much maths as possible.

This report presents the findings of a computerised self-completion questionnaire included in the 2001 British Crime Survey to determine the nature and extent of inter-personal violence in England and Wales. The results of the survey show that inter-personal violence is widespread: approximately one third of the population has been affected by inter-personal violence at some time in their lives; one in twenty women have experienced serious sexual assault; and one in five women and one in ten men have been victims of domestic violence. The results also indicate that there are high levels of repeat victimisation, especially in cases of domestic violence.

This book is based on the author's course notes on the subject of power system dynamics, with emphasis on process simulation and control design methods.

They were developed at home during the years the author was employed at the General Electric Co and later at Power Technologies Inc. as vice president and manager of consulting services. The course was given to over two thousand engineers worldwide. It is a valuable reference for engineers in the power industry.

This book provides a clear overview of current thinking on the teaching and learning of geography. It is an ideal companion to all students beginning a career in teaching the subject in secondary schools. The chapters are written by experienced teacher educators and bridge both theory and practice. The writers focus on the continuities, whilst setting them in the context of the changing curriculum. The book is divided into four parts. Part One examines the historical context of geography teaching. Part Two looks at issues of course planning, design, syllabuses and programmes of study. Underlying this section is the assumption that geography should not be considered in isolation from other subjects, but rather as part of a whole curriculum. Part Three concentrates on teaching and learning, and includes chapters on the use of maps, field work, IT and first hand experience within a community. The final section covers the issues associated with assessment, across the whole school age range.

Copleston, an Oxford Jesuit and specialist in the history of philosophy, created his history as an introduction for Catholic ecclesiastical seminaries. The 11-volume series gives an accessible account of each philosopher's work, and explains their relationship to the work of other philosophers.
