This title, first published in 1984, focuses primarily on the early Industrial Revolution (c. 1780-1820) in the Stockport district. As the Industrial Revolution in England was the first instance of successful industrialisation, it can still provide many social and economic lessons and also furnish essential evidence for continuing debate over ideology and theory. Therefore, this title will be of interest to students of both history and economics.

In Rethinking the Industrial Revolution, Michael Andrew Zmolek offers the first in-depth study of the evolution of English manufacturing from the feudal and early modern periods within the context of the development of English agrarian capitalism, from 1350 to 1850.

The 'Industrial Revolution' was a pivotal point in British history that occurred between the mid-eighteenth and mid-nineteenth centuries and led to far reaching transformations of society. With the advent of revolutionary manufacturing technology productivity boomed. Machines were used to spin and weave cloth, steam engines were used to provide reliable power, and industry was fed by the construction of the first railways, a great network of arteries feeding the factories. Cities grew as people shifted from agriculture to industry and commerce. Hand in hand with the growth of cities came rising levels of pollution and disease. Many people lost their jobs to the new machinery, whilst working conditions in the factories were grim and pay was low. As the middle classes prospered, social unrest ran through the working classes, and the exploitation of workers led to the growth of trade unions and protest movements. In this Very Short Introduction, Robert C. Allen analyzes the key features of the Industrial Revolution in Britain, and the spread of industrialization to other countries. He considers the factors that combined to enable industrialization at this time, including Britain's position as a global commercial empire, and discusses the changes in technology and business organisation, and their impact on different social classes and groups. Introducing the 'winners' and the 'losers' of the Industrial Revolution, he looks at how the changes were reflected in evolving government policies, and what contribution these made to the economic transformation.
