An excellent primer on the 19th and early 20th century sources of Modern Architecture, but a little thin when it comes to the underlying theories that set the stage for the movement that began after WWI. Pevsner starts with the British Arts and Crafts Movement and ends with the Deutscher Werkbund, which the Arts and Crafts Movement inspired.

Modern architecture, or modernist architecture, was an architectural style based upon new and innovative technologies of construction, particularly the use of glass, steel, and reinforced concrete; the idea that form should follow function (functionalism); an embrace of minimalism; and a rejection of ornament. It emerged in the first half of the 20th century and became dominant after World War ...

One of the most widely read books on modern design, Nikolaus Pevsner's landmark work today remains as stimulating as it was when first published in 1936. This expanded edition of *Pioneers of Modern Design* provides Pevsner's original text along with significant new and updated information, enhancing Pevsner's illuminating account of the roots of Modernism. The book now offers many beautiful colour illustrations; updated biographies and bibliographies of all major figures; illustrated short essays on key themes, movements, and individuals; a critique of Pevsner's analysis from today's perspective; examples of works after 1914 (where the original study ended); a biography detailing Pevsner's life and achievements; and much more. Pevsner saw Modernism as a synthesis of three main sources: William Morris and his followers, the work of nineteenth-century engineers, and Art Nouveau. The author considers the role of these sources in the work of early Modernists and looks at such masters of the movement as C.F.A. Voysey and Charles Rennie Mackintosh in Britain, Sullivan and Frank Lloyd Wright in America, and Adolf Loos and Otto Wagner in Vienna. The account concludes with a discussion of the radical break with the past represented by the design work of Walter Gropius and his future Bauhaus colleagues. Nikolaus Pevsner (1902-1983), a distinguished scholar of art and architecture, was best known as editor of the 46-volume series *The Buildings of England* and as founding editor of *The Pelican History of Art*.

Changing Ideals in Modern Architecture revolutionized the understanding of modernism in architecture, pushing back the sense of its origin from the early twentieth century to the 1750s and thus placing architectural thought within the a broader context of Western intellectual history. This new edition of Peter Collins's ground-breaking study includes all seventy-two illustrations of the hard cover original edition, which has been out of print since 1967, and restores the large format.

Over the course of the nineteenth century, drastic social and political changes, technological

innovations, and exposure to non-Western cultures affected Germany's built environment in profound ways. The economic challenges of Germany's colonial project forced architects designing for the colonies to abandon a centuries-long, highly ornamental architectural style in favor of structural technologies and building materials that catered to the local contexts of its remote colonies, such as prefabricated systems. As German architects gathered information about the regions under their influence in Africa, Asia, and the Pacific—during expeditions, at international exhibitions, and from colonial entrepreneurs and officials—they published their findings in books and articles and organized lectures and exhibits that stimulated progressive architectural thinking and shaped the emerging modern language of architecture within Germany itself. Offering in-depth interpretations across the fields of architectural history and postcolonial studies, Itohan Osayimwese considers the effects of colonialism, travel, and globalization on the development of modern architecture in Germany from the 1850s until the 1930s. Since architectural developments in nineteenth-century Germany are typically understood as crucial to the evolution of architecture worldwide in the twentieth century, this book globalizes the history of modern architecture at its founding moment.

"In this book Liane Lefaivre and Alexander Tzonis bring together 140 documents spanning a period from the year 1000 to the end of the eighteenth century. They argue that Modern Architectural thinking was created during this period, a wholly new *forma mentis* for conceiving buildings, landscapes, and cities. The material includes, in addition to the more predictable texts, key extracts from architectural treatises, handbooks, and textbooks, material from letters, articles from the press of the times, scientific memoirs, maxims, poems, plays, and novels. Their authors are equally varied architects, patrons, politicians, artists, poets, scientists, priests, philosophers, and journalists. Some describe and systematize, some argue and criticize, and a large number are eager to present new findings and new ways to construe and construct the world."
