Globalization can contribute to a decline in job opportunities as companies move their production facilities overseas. Forbes reports that the move toward globalization has led to deindustrialization throughout the United States, which was once home to many more factories and auto plants. When American companies move their production to China and other countries with plentiful, cheap labor, American workers suffer under factory closures, layoffs, and skyrocketing unemployment rates where ...

Globalization is transforming business. As education and intellectual property service enterprises, PSEs are affected by globalization in their core "lines of business" just as for-profit enterprises are. Globalization is especially affecting the education part of PSEs' business. Post-secondary students around the world are interested in enrolling in institutions outside their native land, resulting in increasing flows of international students both into and out of Canada.

This volume examines the emergence of the movement of resistance that has arisen to challenge neoliberal forms of globalization. The authors describe how workers, environmentalists, human rights activists and a wide variety of other groups have joined together to protest against institutions such as the WTO, the IMF, and the World Bank. By providing a collection of social scientific analyses, this volume significantly advances our understanding of what is probably the most important progressive movement of our time.

This volume examines the emergence of the movement of resistance that has arisen to challenge neoliberal forms of globalization. The co-authors of this book describe how workers, environmentalists, human rights activists, and a wide variety of other groups have joined together to protest against institutions such as the WTO, the IMF, and the World Bank. Ongoing challenges facing the movement are objectively reviewed. Authors also highlight the continuing vitality of the movement in the post 9/11 period. By providing a collection of social scientific analyses, this volume significantly advances our understanding of what is probably the most important progressive movement of our time.

This book explores the challenges and potential of Fair Trade, one of the world's most dynamic efforts to enhance global social justice and environmental sustainability through market based social change. Fair Trade links food consumers and agricultural producers across the Global North/ South divide and lies at the heart of key efforts to reshape the global economy. This book reveals the challenges the movement faces in its effort to transform globalization, emphasizing the inherent tensions in working both in, and against, the market. It explores Fair Trade's recent rapid growth into new production regions, market arenas, and commodity areas through case studies of Europe, North America, Africa, and Latin America undertaken by prominent scholars in each region. The authors draw on, and advance, global commodity and value chain analysis, convention, and social movement approaches through these case studies and a series of synthetic analytical chapters. Pressures for more radical and more moderate approaches intertwine with the movement's historical vision, reshaping Fair Trade's priorities and efforts in the Global North and South. Fair Trade will be of strong interest to students and scholars of politics, globalization, sociology, geography, economics and business.

Women increasingly make up a significant percentage of the labor force throughout the world. This transformation is impacting everyone's lives. This book examines the resulting gender role, work, and family issues from a comparative worldwide perspective. Working allows women to earn an income, acquire new skills, and forge social connections. It also brings challenges such as simultaneously managing domestic responsibilities and family relationships. The social, political, and economic implications of this global transformation are explored from an interdisciplinary perspective in this book. The commonalities and the differences of women's experiences depending on their social class, education, and location in industrialized and developing countries are highlighted throughout. Practical implications are examined including the consequences of these changes for men. Engaging vignettes and case studies from around the world bring the topics to life. The book argues that despite policy reforms and a rhetoric of equality, women still have unique experiences from men both at work and at home. Women, Work, and Globalization explores: Key issues surrounding work and families from a global cross-cultural perspective. The positive and negative experiences of more women in the global workforce. The spread of women's empowerment on changes in ideologies and behaviors throughout the world. Key literature from family studies, IO, sociology, anthropology, and economics. The changing role of men in the global work-family arena. The impact of sexual trafficking and exploitation, care labor, and transnational migration on women. Best practices and policies that have benefited women, men, and their families. Part 1 reviews the research on gender in the industrialized and developing world, global changes that pertain to women's gender roles, women's labor market participation, globalization, and the spread of the women's movement. Issues that pertain to women in a globalized world including gender socialization, sexual trafficking and exploitation, labor migration and transnational motherhood, and the complexities entailed in care labor are explored in Part 2. Programs and policies that have effectively assisted women are explored in Part 3 including initiatives instituted by NGOs and governments in developing countries and (programs) policies that help women balance work and family in industrialized countries. The book concludes with suggestions for global initiatives that assist women in balancing work and family responsibilities while decreasing their vulnerabilities. Intended as a supplemental text for advanced undergraduate and/or graduate courses in Women/Gender Issues, Work and Family, Gender and Families, Global/International Families, Family Diversity, Multicultural Families, and Urban Sociology taught in psychology, human development and family studies, gender and/or women's studies, business, sociology, social work, political science, and anthropology. Researchers, policy makers, and practitioners in these fields will also appreciate this thought provoking book.

The technological revolution has reached around the world, with important consequences for business, government, and the labor market. Computer-aided design, telecommunications, and other developments are allowing small players to compete with traditional giants in manufacturing and other fields. In this volume, 16 engineering and industrial experts representing eight countries discuss the growth of technological advances and their impact on specific industries and regions of the world. From various perspectives, these distinguished commentators describe the practical aspects of technology's reach into business and trade.

As China develops its economy, the author argues it will be held back by its refusal to import democratic values.

"In the US, in Europe, and throughout the world, globalization, in tandem with technological progress, has left a massive number of people behind, feeling dispossessed, disenfranchised, and angry. Leading the charge of "hyperglobalization" during the second half of the last century, and enforcing the Western framework of austerity in the developing world has been the International Monetary Fund. Along with the World Bank and WTO, many consider the IMF one of the most consequential institutions to have pushed the world economy blindly towards excessive globalization, while not adequately considering its powerful negative consequences. In October 2017, however, the IMF convened with some of the world's most celebrated economists and experts on trade and globalization to have an honest discussion on the most pressing concerns the world faces today as a result of globalization, and how to address the extensive challenges it has created. Edited by chief economist Maurice Obstfeld and senior economist Luis Catao of the IMF, the book brings together a team of respected senior economists with the most promising younger scholars to address five major themes: how globalization affects economic growth and social welfare; potential political implications of an honest discussion of globalization, and that "free trade may not be politically viable"; free trade's role in global inequality; how workers adjust or not when they're dislocated by globalization; and how trade policy influences the way countries develop their economies and societies. The book could represent a historic milestone at which the world's top economists and policymakers have an unprecedented, honest debate about the real costs and consequences of globalization"--
