These disturbing behaviors are a common sight in many zoos. Laidlaw effectively captures the plight faced by captive wild animals, even in major, apparently high-quality zoos. In four riveting chapters he explores first the general issues of life in captivity, then addresses specific, often severe, problems faced by polar bears, elephants, dolphins and Great Apes. He goes on to discuss types of zoos and their particular flaws, then concludes with advice for readers on objective evaluation of the zoos they visit and offers a list of ten ways to help animals in captivity. As people come to understand more about animals’ inner lives—the intricacies of their thoughts and the emotions that are expressed every day by whales and cows, octopus and mice, even bees—we feel a growing compassion, a desire to better their lives. But how do we translate this compassion into helping other creatures, both those that are and are not our pets? Bringing together the latest science with heartfelt storytelling, *Animals’ Best Friends* reveals the opportunities we have in everyday life to help animals in our homes, in the wild, in zoos, and in science labs, as well as those considered to be food. Barbara J. King, an expert on animal cognition and emotion, guides us on a journey both animal and deeply human. We meet cows living relaxed lives in an animal sanctuary—and cows with plastic portals in their sides at a university research station. We observe bison free-roaming at Yellowstone National Park and chimpanzees confined to zoos. We learn with King how to negotiate vegetarian preferences in omnivore restaurants. We experience the touch of a giant Pacific octopus tasting King’s skin with one of his long, neuron-rich arms. We reflect on animal testing as King shares her own experience as the survivor of a particularly nasty cancer. And in a moment all too familiar to many of us, we recover from a close encounter with two spiders in the home. This is a book not of shaming and limitation, but of uplift and expansion. Throughout this journey, King makes no claims of personal perfection. Though an animal expert, she is just like the rest of us: on a journey still, learning each day how to be better, and do better, for animals. But as *Animals’ Best Friends* makes clear, challenging choices can bring deep rewards. By turning compassion into action on behalf of animals, we not only improve animals’ lives—we also immeasurably enrich our own.
