This book includes Monday to Friday lessons for each day of a 36-week school year and short daily lessons. The Monday to Thursday lessons include two sentences to edit, including corrections in punctuation, capitalization, spelling, grammar, and vocabulary and three items practicing a variety of language and reading skills. Friday practice cycles through five formats: language usage, identifying and correcting mistakes, combining sentences, choosing reference materials and figurative speech (similes, metaphors). The pages are reproducible and the book includes a skills list and answer keys.

Perspectives in Curriculum Studies by Margaret Nalova Endeley and Martha Ashuntantang Zama is a comprehensive textbook for graduate students of Curriculum Studies and Instruction, and a guide for education practitioners wherein they articulate contemporary curriculum concepts, principles and applications in the field. With illustrations from informed African perspectives, the authors situate curriculum theory and practice in local contexts so that African scholars, educators, and others may be equipped with knowledge and skills to develop and maintain appropriate and relevant curricula for quality education. Framed in sixteen chapters, grouped in five parts, the text begins with the exposition of basic terminology, curriculum theory and foundations of the curriculum before delving profoundly into the curriculum development process. The latter portion gives the reader the opportunity to explore, analyse and evaluate different curriculum planning approaches and models, curriculum design dimensions and patterns, and procedures for the development of syllabuses, textbooks, and other curriculum materials. Also, Curriculum implementation tasks as well as strategies for evaluation of programs and courses are presented and discussed. Since curriculum and instruction are highly intertwined notions, instructional design is elaborately treated in two chapters bringing out its theoretical underpinnings and procedures. The book closes with global perspectives of curriculum development in practice. The goal here is to provide insights into trends, issues, and challenges not only in curriculum development but also in the curriculum field, which should generate action towards the improvement of curriculum practice and spur the search for new knowledge.

Obi Okonkwo is an idealistic young man who, thanks to the privileges of an education in Britain, has now returned to Nigeria for a job in the civil service. However in his new role he finds that the way of government seems to be backhanders and corruption. Obi manages to resist the bribes that are offered to him, but when he falls in love with an unsuitable girl - to the disapproval of his parents - he sinks further into emotional and financial turmoil. The lure of easy money becomes harder to refuse, and Obi becomes caught in a trap he cannot escape. Showing a man lost in cultural limbo, and a Nigeria entering a new age of disillusionment, No Longer at Ease concludes Achebe's remarkable trilogy charting three generations of an African community under the impact of colonialism, the first two volumes of which are Things Fall Apart and Arrow of God.

Presents an introduction to volcanoes and earthquakes, explaining how the movement of the Earth's interior plates cause their formation and describing the volcanoes which currently exist around the world as well as some of the famous earthquakes of the nineteenth through twenty-first centuries.

This extensively revised, restructured, and updated edition continues to present an engaging and comprehensive introduction to the subject, exploring the world's landforms from a broad systems perspective. It covers the basics of Earth surface forms and processes, while reflecting on the latest developments in the field. Fundamentals of Geomorphology begins with a consideration of the nature of geomorphology, process and form, history, and geomorphic systems, and moves on to discuss: structure: structural landforms associated with plate tectonics and those associated with volcanoes, impact craters, and folds, faults, and joints process and form: landforms resulting from, or influenced by, the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind, and the sea; landforms developed on limestone; and landscape evolution, a discussion of ancient landforms, including palaeosurfaces, stagnant landscape features, and evolutionary aspects of landscape change. This third edition has been fully updated to include a clearer initial explanation of the nature of geomorphology, of land surface process and form, and of land-surface change over different timescales. The text has been restructured to incorporate information on geomorphic materials and processes at more suitable points in the book. Finally, historical geomorphology has been integrated throughout the text to reflect the importance of history in all aspects of geomorphology. Fundamentals of Geomorphology provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology. Written in an accessible and lively manner, it includes guides to further reading, chapter summaries, and an extensive glossary of key terms. The book is also illustrated throughout with over 200 informative diagrams and attractive photographs, all in colour.
